51 9. Implications of the Study

Introduction

In 1985, the Rockefeller Brothers Fund commissioned Yankelovich, Skelly and White to conduct a national survey about the charitable behavior of Americans. The last time such a study was conducted was in 1974 when the Commission on Private Philanthropy and Public Needs (the Filer Commission) commissioned the Survey Research Institute at the University of Michigan to conduct a much larger survey than the present one.

The purpose of this study was to examine a limited set of hypotheses in order to determine whether they had any effect on the charitable behavior of Americans:

1. ***What are the attitudes of Americans toward charitable giving and volunteering?***
2. ***How do Americans distribute their giving between religious giving and other charities?***
3. ***Is there a relationship between religious giving and giving to other charities?***
4. ***Is there a relationship between attendance at religious services and religious giving?***
5. ***Is there a relationship between contributed volunteer time and giving?***
6. ***What effect does perceived discretionary income have on giving?***
7. ***What effect does worrying about having enough money in the future have on giving?***
8. ***Is there any relationship between demographic characteristics – age, income, marital status, religion, education, occupation – and giving?***
9. ***Is there any relationship between the method of giving and the amount given?***
10. ***What charitable causes do large donors support, and why do they give to these causes?***

11. Do Americans think they are giving enough to charities?

12. Do Americans believe that they should volunteer to help others?

This study also gives special attention to the giving behavior of young (under 35 years of age) Americans. This generation of Americans is assuming adult roles under a peculiar set of social, economic, demographic, and ideological circumstances — conditions which shape their value orientations and behavior, including their charitable giving behavior. Various sections of this study examine whether this group of younger Americans behaves differently from older generations of Americans.

Surprisingly, little research has been done on motivations for giving and their effect on charitable behavior. This study is an attempt to start filling that void. The study has some limitations. Except for donors who gave more than $500 to charity in 1984, respondents were not asked what specific charities they donated to. All respondents were asked whether they gave to religious charities and other charities, and how much they contributed to each.

Since one of the purposes of this study was to look at the differences in behavior of Americans when they gave to religion and to other charities, religious giving was not broken down between contributing to a church or synagogue or contributing to other religious charities. Nor were respondents asked for the specific purposes of their religious contributions. Therefore, religious giving in this study includes both giving for sacramental purposes, as well as other church activities, including support of the poor, social services, education, and religious associations, such as the National Catholic Charities or the American Jewish Federation. Because all religious giving regardless of purpose is added together in this study, total giving for religion is higher in this survey than in other studies that distinguish between giving to religion for sacramental purposes and other religious giving.

Study Characteristics

The information provided in this report was obtained through telephone interviews conducted from February 5-15, 1985, on a sample of 1,151 Americans 18 years of age or older. Higher-income ($30,000 and above) Americans were oversampled in order to have enough respondents in the upper income groups to carry out statistically reliable analyses. Weighting procedures were used to ensure that the final sample was representative of the public along the lines of age, income, marital status, household size, and area and region of the country.

This report includes a summary of the highlights of this study and the detailed findings of the study. A separate management summary of this study by Arthur White, Vice Chairman of Yankelovich, Skelly and White, accompanies this report.

the lines of age, income, marital status, household size, and area and region of the country.

This report includes a summary of the highlights of this study and the detailed findings of the study. A separate management summary of this study by Arthur White, Vice Chairman of Yankelovich, Skelly and White, accompanies this report.

Charitable Behavior of Americans

The Rockefeller Brothers Fund commissioned Yankelovich, Skelly and White to conduct a national survey on the charitable behavior of Americans. In February 1985, telephone interviews were conducted with a nationally representative sample of 1,151 Americans 18 years of age or older. Americans were asked a series of questions about their giving behavior, their motivations for giving, and their attitudes toward charitable giving and volunteering. The purpose of this report was to provide much-needed information about this neglected area of research on patterns of giving and motivations for giving among Americans.

Highlights

- **Giving to charities remains a pervasive activity among Americans.** Eighty-nine percent of Americans reported contributing to charities in 1984. Americans gave an average of $650 to charities in 1984. Eighty-one percent of all Americans believed that it is the responsibility of people to give what they can to charities.
- **Americans gave an average of 2.4 percent of their household incomes to charities in 1984.** While more than half of all Americans gave less than one percent of their incomes to charities, more than one out of four gave 3 percent or more of their incomes to charities. Thirteen percent gave 5 percent or more of their income to charity.
- **Demographic characteristics have some influence on giving.** Persons who are married or widowed, have higher education, are Protestants, are in professional occupations, are between 50 and 64 years of age, and have higher incomes are among the most generous givers to religion and other charities. Persons with less than high school education and lower incomes give less and most of their contributions go to religion. Persons over 65 years of age are among the most generous of givers as a percentage of income, and they give most of their contributions to religious charities. Persons who volunteered contributed an average of $850 to charities compared to an average contribution of $510 for those persons who did not volunteer.
- **There is a clear relationship between regular attendance at religious services and giving to religious charities.** Total contributions for those who attended religious services weekly was on average three times as great ($990) than for the person who did not attend at all ($300).
- **While 42 percent of respondents reported pledging a dollar amount to their church** or synagogue each week and 30 percent of respondents reported pledging a proportion of their incomes to their church or synagogue, less than one out of ten

Americans reported pledging either a dollar amount or a proportion of their incomes to other charities.

- **Those who pledged a certain dollar amount each week to their church or synagogue on average gave almost twice as much ($880) to religious charities** compared to those who did not pledge ($460). Those who tried to give a proportion of their incomes to the church gave almost three times as much ($1,210) compared to those who did not ($440). Although the proportion of Americans who pledged a dollar amount to other charities was very small, the trends were similar: that is, those that pledged a dollar amount annually gave $570 to other charities compared to $250 for those who did not plan their giving.
- **Perceptions of discretionary income were important indicators** of how much Americans gave. Although perceptions of having discretionary income increased with household income, those respondents at all income levels who reported that they had some discretionary income gave more generously to charities. In 1984, 34 percent of those respondents who reported that they had a moderate or a lot of discretionary income left over gave an average of $1,120 compared to $510 for the 39 percent of respondents who reported that they had a small amount of discretionary income, and $250 for the 27 percent of respondents who reported they had no discretionary income.
- **Whether Americans worried about having enough money in the future was another indicator of how much people gave.** More people who worried a lot about money came from lower-income households. More than one-third of respondents who had no worries about money or who worried only a little bit gave $500 or more to charities in 1984 compared to 5 percent of respondents who worried a lot about money.
- **The five major indicators in rank order** for all respondents who gave 2 percent or more of their incomes to charity were:

  (1) attend religious services weekly;

  (2) perceive that they have a moderate amount or a lot of discretionary income;

  (3) have no worries about having enough money in the future;

  (4) volunteered in the last year; and

  (5) worried only moderately or a little about money.

- **There were differences in the giving patterns and behavior between those below 35 years of age and those older than 35 years.** For persons under 35 years of age, 32 percent gave more than 2 percent of their income to charities compared to 51 percent of the 50- to 64-year-old age group.
- **Only about half of those respondents under 35 who were married and attended church weekly gave 2 percent or more of their incomes** compared to 65 percent of those between 35 and 64 years of age. While the proportion who gave 2 percent or more increased as incomes increased among those over 35 years of age, it remained steady or declined slightly among those who were under 35 years of age.
- **When donors who gave more than $500 to charities** in 1984 were asked which type of solicitation they were most likely to respond to, more than three out of four reported that they were most likely to give when asked by a person they knew well.
- **When asked how their giving compared to their peers,** more than one out of five Americans responded that they did not know how their giving compared to their peers.
- **Almost two out of five Americans** reported that they should have given more to charity in the last year.
- **In 1984, 47 percent of Americans volunteered.** More than half volunteered two hours or less each week, but 46 percent volunteered three or more hours per week. Thirty percent of those who volunteered contributed five or more hours per week.
- **Almost eight out of ten Americans believed** that persons should contribute time to people who are less fortunate.
- **Of the nearly eight out of ten Americans who believed** they should volunteer time, 49 percent did not volunteer in 1984.

1. Who Gives? To Whom? How Much?

Overall, the National Survey on the Charitable Behavior of Americans showed that giving to charity is a pervasive activity among Americans. Only 9 percent reported that they did not give anything at all.

Respondents were asked whether they gave to a religious institution and how much, and whether they gave to other charities and how much. The total for both types of giving were then summed from these two questions to get total amount of giving figures, as shown in Figure 1.0.

Respondents who were not sure of their amount of giving or who refused to report their amounts of giving were deleted from the remaining tables and estimates were recalculated. The effect of deleting this group of respondents is to increase the nongiver category from 9 percent in Figure 1.0 to 11 percent as shown in Table 1.0.

FIGURE 1.0

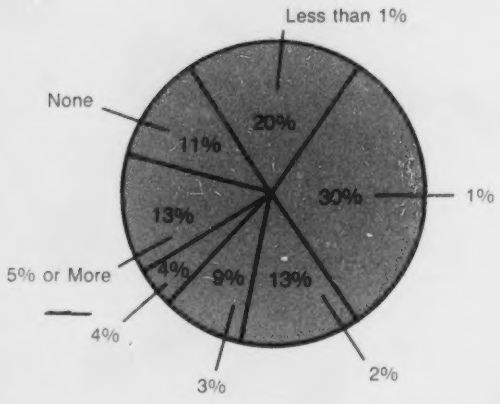
NA = Not Available

*The figures here and in subsequent tables have been adjusted to exclude those respondents who either reported giving, but did not report a specific amount or did not respond at all. All of the remaining tables in this report reflect these adjustments.

FIGURE 1.1
CHARITABLE GIVING AS A PERCENTAGE OF INCOME: 1984*



Mean Percentage of Income	2.4

*Income percentages shown in terms of class intervals in this report, unless otherwise specified, represent midpoints of their respective intervals, e.g., less than one percent = less than 0.50 percent, one percent = 0.50 percent-1.49 percent, 5 percent or more = 4.50 percent or more.

All Americans gave a mean contribution of $650 in the past year. For givers only, the mean contribution was $740, as shown in Table 1.0. The respondents were asked to estimate the amounts they gave to religious institutions and then to other charities. The findings confirm what other surveys have found — that approximately 70 percent of individual giving goes to religion.

Table 1.0 shows that 89 percent of Americans reported giving to charities in 1984. Eleven percent of donors gave between $1 and $50; 11 percent gave between $50 and $100; 18 percent gave between $250 and $500; 13 percent gave between $500 and $1,000; 10 percent gave between $1,000 and $2,000; and 8 percent contributed more than $2,000. One-third of all Americans gave $500 or more to religious and other charities in 1984.

When contributions were calculated as a percentage of income, Americans on average contributed 2.4 percent of their income to charities in 1984. Over one-quarter of Americans gave 3 percent or more of their incomes to charities. Thirteen percent of Americans gave 5 percent or more of their incomes to charities. On the other hand, half of all Americans gave one percent or less of their incomes to charities.

What this survey does not show, however, is how and for what activities religious donations are used, since religious institutions are both users of charitable contributions and donor organizations. That is, churches support various charitable activities such as education, support of the elderly, care for the poor, etc. Except for donors who contributed $500 or more, respondents were not asked to designate gifts to particular types of charities — such as education, health, art, or social services.

What Are the Characteristics of Americans Who Give?

The National Survey of the Charitable Behavior of Americans provides a wealth of demographic information which makes it possible to look at the giving patterns of Americans by age, race, sex, income, occupation, education, marital status, etc. The summary results of these giving patterns by various characteristics are included in Table 1.1. What is unique in this survey is that persons with higher incomes were sufficiently sampled and the giving as a percentage of household income was provided for religious giving, other giving, and total giving.

Generally, this survey confirms the patterns of giving found in earlier surveys. Charitable giving tends to increase with age, education, income, and occupational status. However, Table 1.1 provides a wealth of demographic information that was unavailable in previous surveys.

Overall, Americans gave an average of 2.4 percent of their household incomes to charity. However, there was a variation in the percentage of income given by various demographic groupings. Persons under 30 years of age gave a lower percentage of income than other age groups. Persons between 30 and 35 years of age gave 1.7 percent of their income to religious and other charities although their average income of $29,000 exceeded the national average income of $27,300. Persons between 35 and 49 years of age on average gave 2.6 percent of their income to charity. Persons who were 50 to 64 years of age were on average the most generous givers, donating 3 percent of their total income to charity with approximately two-thirds going to religious and one-third going to other charities. Persons over 65 years of age, although they have the lowest average household income ($14,900), still remain among the most generous of givers, donating an average 2.7 percent of their income, primarily to religious charities.

Among the respondents, males reported donating a slightly higher percentage of their household income (2.5 percent) to charity compared to females (2.2 percent). Blacks donate on average 2.1 percent of their incomes to charity, slightly lower than whites (2.5 percent).

Three or More	900	740	170	3.0	2.5	0.6	30,000

*Numbers may not add up due to rounding. Estimates exclude those respondents who reported "Not sure or no answer" to particular questions.

For those with incomes between $10,000 and $50,000, the proportion of income given to charities averages about 2.3 percent. For the low- (under $10,000) and high-income ($50,000 and over) groups, about 3.0 percent of income is given to charities. The proportion given to charities is distributed differently for the low- and high-income groups. The low-income groups give about 80 percent of their contributions to the church, whereas, the high-income groups contribute 60 percent to religious charities and 40 percent to other charities.

Total contributions by occupation vary in terms of amount, but with few exceptions, occupation does not seem to be a major determinant for distinguishing one giver from another when giving as a percentage of income is taken into account. Retired persons were by far the most generous givers. They gave an average of 3 percent of their income to charity with more than three-quarters of their contributions going to religious charities. Professional workers other than retired persons were the only group whose total contributions were above the national average of 2.4 percent, and the average total contributions of business managers were at the national average.

There are some differences by occupation in the proportion of total contributions given to religion and other charities. Clerical and sales workers, professionals and business managers gave a third or slightly more than a third of their total contributions to other charities. All other groups by occupation gave between 20 and 40 percent or less than one-quarter of their total contributions to other charities.

Persons with more education tended to give a higher proportion of their income to charity and to distribute their giving in different proportions. While persons who were high school graduates or below gave an average of 2 percent of their incomes to charity; 80 to 85 percent went to the church. Persons with two- and four-year college degrees gave 2.7 percent of their income to charity, with one-third of their contributions going to other charities, while persons with postgraduate education gave 3 percent of their income to charity of which 40 percent went to other charities.

For the first time more detailed information about giving by chuch denomination was collected. Information on giving patterns by Catholic and some major Protestant denominations shows a difference in giving patterns to both religious and other charities. Although there were respondents who identified themselves as Jewish, Mormon, Congregationalist, Pentacostal, Unitarian, and United Church of Christ, there were too few responses to make any statements about their giving patterns. Most of these groups, other than Jewish, are included in the total for Protestant. The other denominations or combinations of denominations listed had a sufficient number of respondents to talk about giving patterns. However, most of the findings, other than for total Catholic and total Protestant, ought to be viewed with some caution since the sample size was not large enough for various separate denominations to adequately reflect giving patterns to these churches or other religious charities with accuracy.

Taking the above concerns into consideration, certain trends do emerge about giving patterns to churches by denomination. On average Protestants contributed almost twice as much to charity as a percentage of household income (2.9 percent) than Catholics (1.6 percent). This is in spite of the fact that there was a difference in average household income between Catholics ($27,500 and Protestants ($26,400). Catholics, on an average, give a larger proportion of their contributions (about one-third) to other charities than Protestants (about one-fourth).

Among major Protestant denominations some variations in giving patterns emerge. Presbyterians and Episcopalians combined gave 3.7 percent of their income to charities, 2.2 percent to the church, and 1.4 percent or approximately 38 percent of their contributions to other charities. The only other denomination where respondents reported giving 2 percent or more to the church were Baptists. They, unlike the Presbyterians and Episcopalians, donated less than 17 percent of their total contributions to other charities. Methodists and Lutherans donated more than 2 percent of their income to charity with 25 to 30 percent of their total contributions going to other charities.

Generally, people who were married or widowed gave a higher percentage of their income to charities, and those who were single gave the smallest percentage of income to charities. Persons who were married tended to give almost twice as much as a proportion of their income (2.6 percent) than those who were single (1.4 percent).

Giving by household size did not vary significantly, except that those respondents who reported having two persons in a household or five or more tended to give a larger proportion of their incomes to charities. Similarly, persons reporting three or more children under 18 tended to give a large proportion of their incomes to charities.

8

2. Giving Behavior

This section is devoted to a look at the giving behavior of Americans from several different perspectives. First, American giving behavior is examined by looking at the characteristics of low, medium, and substantial givers. Second, giving behavior is further explored by looking at a range of factors that seem to influence giving beginning with the perception of discretionary income.

In order to summarize giving behavior, givers were divided into three groups based upon the percentage of income given to charity. By using percentage of income as an indicator of the level of giving, persons could be viewed by the resources they had available rather than on the amount of income alone. Those that contributed less than one percent of their income to charity or 31 percent of respondents were defined as low-level givers. Persons who contributed one or 2 percent of their incomes to charity or 43 percent of respondents were defined as middle-level givers, and persons who gave 3 or more percent of their incomes to charity or 26 percent of respondents were classified as substantial givers, as shown on Table 2.0.

TABLE 2.0
CHARACTERISTICS OF CONTRIBUTIONS BY LOW, MIDDLE, AND SUBSTANTIAL GIVERS

	Low-Level Givers (Less Than 1% of Income)* (Percent)	Middle-Level Givers (1-2% of Income)* (Percent)	Substantial Givers (3% or More of Income)* (Percent)
Total Respondents	31	43	26
Income Level			
Under $20,000	40	41	19
$20,000 – $39,999	27	46	27
$40,000 and Above	17	45	38

35 to 64 Years	24	45	31
65 Years and Older	31	44	25
Income Level, Under 35			
Under $30,000	42	41	17
$30,000 and Above	37	40	23
Income Level, 35 to 64 Years			
Under $30,000	32	45	23
$30,000 and Above	14	46	40

Note: Percentages read horizontally.

*Less than 1 percent = less than 0.50 percent, 1 percent = 0.50 - 1.49 percent, 2 percent = 1.50 - 2.49 percent, 3.0 percent or more = 2.50 percent or more.

There is a definite relationship between income and the distribution of contributions by percentage of income. As income increases, the percentage of low-level givers decreases and the percentage of substantial givers increases. Forty percent of persons with incomes below $20,000 gave less than one percent of their income to charity compared to 17 percent of respondents with incomes above $40,000. On the other hand, 19 percent of respondents with incomes below $20,000 were substantial givers, while 27 percent with incomes between $20,000 and $40,000 and 38 percent with incomes over $40,000 were substantial givers. Generally, there was not much difference by income for mid-level givers, as shown in Table 2.0.

Married persons give a higher proportion of their income to charity. Thirty-one percent of respondents who were married reported that they gave 3 or more percent of their income to charity. Persons who were widowed also tended to be more substantial givers. The largest proportion of low-level givers are among single people. Over 47 percent of this group of respondents reported contributing one percent or less of their income to charity. Divorced and separated persons fall somewhere between these other groups.

There were some differences in the level of giving by age. Almost two-fifths of persons under 35 years of age were low-level givers compared to 24 percent who were low-level givers in the 35 to 64 years of age group and 31 percent of those 65 years and older. Only 19 percent of those under 35 years of age were substantial givers compared to 31 percent for the 35 to 64 years of age group and 25 percent for those 65 years and older.

Persons under 35 and between 35 and 64 when broken down by income group still show the same pattern. Forty-two percent of persons under 35 with household income under $30,000 were low-level givers compared to 32 percent of persons with the same income who are between 35 and 64 years of age. The differences are similar by age and income for substantial givers also. Seventeen percent of respondents under 35 years of age with household income under $30,000 were substantial givers while 23 percent of the 35- to 64-year-old age group with the same income profile were substantial givers. For those reporting more than $30,000 in household income, 23 percent of those under 35 and 40 percent between 35 and 64 years of age were substantial givers.

In order to compare differences in giving behavior between the two age groups, they are shown in Table 2.1 by percentage of income given to charities and frequency of attendance at religious services. Persons under 35 years of age consistently give less than those from 35 to 64 years of age regardless of income or frequency of attendance at religious services.

TABLE 2.1
CHARITABLE GIVING REPORTED BY PERSONS UNDER 35 YEARS AND BETWEEN 35 AND 64 YEARS OF AGE BY INCOME, PERCENTAGE OF INCOME, AND FREQUENCY OF CHURCH ATTENDANCE

Only a Few Times a Year	64	36	68	32	61	39
Never	64	36	53	47	71	29

Note: Percentages read horizontally by groups.

*Percentages in table formats such as this one represent cutoffs and not midpoints. Under 2 percent is 1.99 percent or less. Above 2 percent is 2 percent or more.

For persons under 35, 32 percent gave more than 2 percent of their incomes to charity regardless of their income. Fifty-one percent of persons from 35 to 64 years of age gave more than 2 percent of their incomes to charity. However, 53 percent of those with household incomes over $30,000 gave more than 2 percent compared to 49 percent of those with household incomes below $30,000.

Although weekly church attendance did increase total giving for both age groups, it was far more dramatic for those in the 35- to 64-year-old group. Half of those who attended church weekly in the below 35- year-old group gave more than 2 percent of their income to charity compared to 65 percent of those between 35 and 64 years of age. Where the percentage of those respondents in the 35 to 64 years old group who attended weekly who gave 2 percent or more increased from 65 to 73 percent as income increased, those under 35 years of age showed little or no change as income increased.

Other than weekly church attendance for the 35 to 64 years of age group, the level of income does not particularly affect the proportion of income given to charity for either age group. However, on all indicators from church attendance once a week to never and by income, the proportion of persons under 35 years of age giving more than 2 percent to charity is significantly lower than that for the 35- to 64- year-old age group.

Giving and Discretionary Income

One of the unique features of this survey was to ask respondents a series of questions about their perceptions of their economic situation and then to relate respondents' perceptions to their reported giving behavior. Respondents were asked whether they had only enough money for basic necessities, or whether they had a small, moderates or large amount of money left over to spend on other things.

Table 2.2 shows that 27 percent of the respondents reported that they had only enough money to pay for their basic necessities; 39 percent responded that they had a small amount of money left over; 30 percent reported that they had a moderate amount left over; and 4 percent had a lot left over.

Giving both in amount of contributions and as a percentage of income reflected the respondents' perceptions of their income situation. Those who reported that they had only enough for basic necessities gave an average contribution of $250 or approximately 1.3 percent of their total income to charity. Those who reported that they had a small amount left over gave an average of $510 to charity, or 2.2 percent of their income. Those who responded that they had a moderate amount or a lot left over gave $1,120 to charity or approximately 3 percent of their income.

TABLE 2.2
RESPONDENTS' PERCEPTIONS OF HAVING DISCRETIONARY MONEY

Description of Economic Situation	Total (Percent)
I Have Only Enough Money to Pay for the Basic Necessities	27
I Have a Small Amount of Money Left Over to Spend on Other Things	39
I Have a Moderate Amount Left Over	30
I Have a Lot Left Over	4
Total =	100

PERCEIVED DISCRETIONARY INCOME AND CHARITABLE GIVING

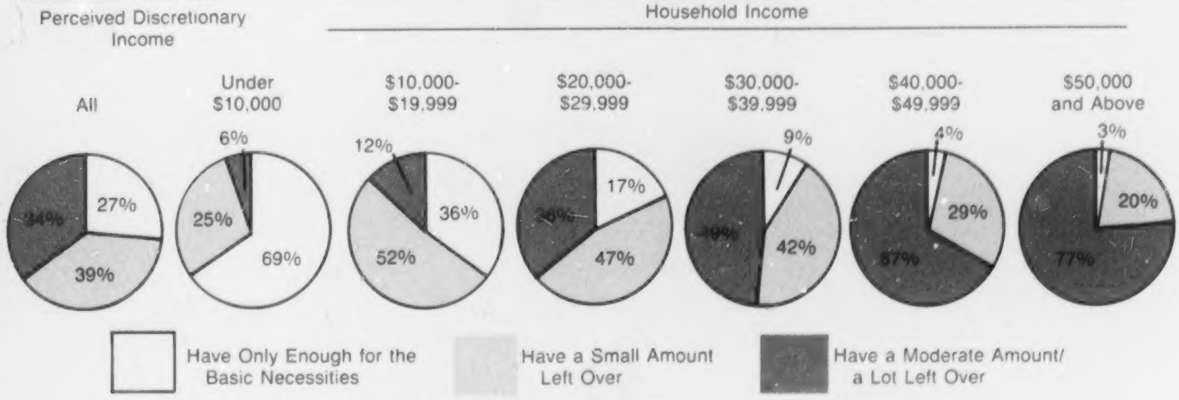
	Have Only Enough for Basic Necessities	Have a Small Amount Left Over	Have a Moderate Amount/ a Lot Left Over
All Respondents			
Mean Contribution	$250	$510	$1,120
Mean Percentage of Income	1.3	2.2	3.0
Givers Only			
Mean Contribution	$320	$560	$1,170
Mean Percentage of Income	1.7	2.4	3.1

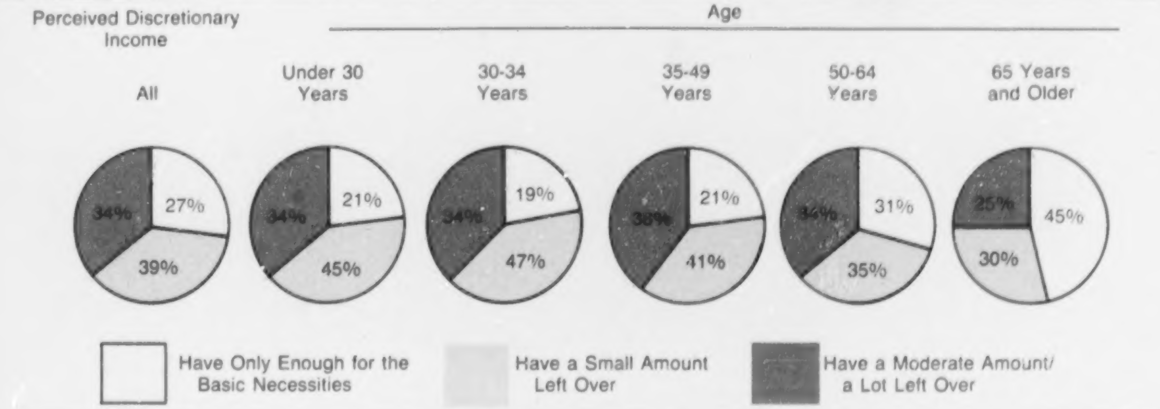
The percentage of respondents perceiving the availability of discretionary income increases as household income increases. Figure 2.0 shows that over two-thirds of respondents with incomes under $10,000 responded that they had only enough for basic necessities while 77 percent of the respondents with incomes of $50,000 or more reported that they had a moderate amount or a lot of money left over to spend on other things.

The majority of respondents by age group reported that they had a small or greater amount of money left over to spend on other things. Almost half of those over 65 years of age and almost a third of those 50 to 64 reported that they had only enough income for basic necessities. Except for those over 65 years of age, more than a third of the respondents in all the other age groups reported that they had a moderate amount or a lot of money left over to spend on other things.

Respondents who reported having extra money were

TABLE 2.3
RESPONDENTS' PERCEIVED DISCRETIONARY INCOME BY HOUSEHOLD INCOME AND AGE





asked how they spent their discretionary income. Almost two-thirds of the respondents reported spending some of their money helping friends and relatives (Table 2.3), 59 percent reported that they use some of their income to buy nice things for themselves or their home, 57 percent responded that they used some of their money for saving and investing, while one-third of respondents reported that they spent some of their discretionary income on trips and vacations. Although respondents were not asked whether they spent any of their discretionary income on charitable giving, the overwhelming response about spending money to help friends and relatives is an indication that one of the most common uses of discretionary income was to help others.

Table 2.4 is a summary of respondents giving behavior according to their perceptions of discretionary income. What is an interesting finding here is that regardless of respondents' perceptions of the amount of discretionary income, over 40 percent of respondents were middle-level givers whether they

TABLE 2.3

Taking Trips and Vacations	33

*Asking respondents who reported having some money left over as shown in Table 2.2.
Base = 73% of respondents.

felt they had no discretionary income, or a small amount, or a moderate amount. What is less surprising is that a higher percentage of those respondents (44 percent) who reported that they had no discretionary income were low-level givers compared to 22 percent of the respondents who reported that they had a moderate amount of discretionary income and who also were low-level givers. A higher percentage (37 percent) of respondents who reported that they had a moderate amount or a lot of discretionary income were substantial givers, compared to 23 percent of those respondents who reported that they had only a small amount of discretionary income and 14 percent of respondents who reported that they had no discretionary income at all.

TABLE 2.4

Have a Small Amount Left Over	31	46	23
Have a Moderate Amount/a Lot Left Over	22	41	37

Note: Percentages read horizontally.

Respondents were grouped by level of household income, by level of giving, and by their perceptions of how much discretionary income they had as shown on Table 2.5. Perceptions about discretionary income does have some influence on giving, regardless of income level. Those persons who reported that they had only enough for basic necessities, or had only a small amount of discretionary income had a higher proportion of low-level givers among persons with incomes under $40,000. Regardless of income or perception about discretionary income a third or more than half of all respondents were middle-level givers. Again, perceptions of having a moderate amount or a lot of discretionary income led to a higher percentage of substantial givers as shown in Table 2.5. Thirty-nine percent of respondents with incomes under $20,000 who reported that they had a moderate amount of discretionary income were substantial givers, 33 percent of those with incomes between $20,000 and $40,000 were substantial givers, and 42 percent of respondents with incomes above $40,000 were substantial givers.

When respondents were grouped by their perceptions of discretionary income and age (Table 2.6), a higher proportion of respondents who reported that they had only enough income for basic necessities were low-level givers in all age groups. However, more than 40 percent of respondents who reported that they had no discretionary income were also middle-level givers in all age groups.

Have a Small Amount Left Over	19	53	28
Have a Moderate Amount/a Lot Left Over	17	41	42

*Too few for analysis.

Note: Percentages read horizontally.

There was a higher proportion of substantial givers in all age groups among respondents who reported that they had a moderate amount or a lot of discretionary income. However, among respondents under 35 years of age reporting that they had a moderate amount or a lot of discretionary income, only 25 percent were substantial givers compared to 44 percent who were substantial givers in the 35- to 64-year-old age group, and 43 percent in the 65 years or over age group.

TABLE 2.6

Have a Small Amount Left Over	21	46	33
Have a Moderate Amount/a Lot Left Over	21	36	43

Note: Percentages read horizontally.

This survey shows that perceptions of the amount of discretionary income does have an influence on the proportion of persons who become substantial givers regardless of income. That is, if respondents, regardless of their income, perceived that they had a moderate amount or a lot of discretionary income, a higher proportion of those respondents were substantial givers. However, the survey also shows that a larger proportion of persons from the middle- and higher-income groups perceive that they have discretionary income compared to lower-income groups confirming that there is a strong relationship between the amount of household income and perceptions about having discretionary income.

Perceptions About Future Economic Well-Being

Respondents were asked a further question to determine whether there is any relationship between their perceptions about their economic situation and charitable giving. They were asked whether they ever worried about having enough money in the future. Those respondents who answered "yes" to this question were then asked how much they worried. Table 2.7 shows the respondents' responses to this question and the distribution of their responses by income range.

Thirty-five percent of respondents reported that they did not worry about having enough money in the future. Of the 65 percent of respondents who answered yes to this question, 23 percent worried a lot, 41 percent worried a moderate amount, and 36 percent reported that they worried only a little.

There is some relation between the degree of worrying about money and income as shown on Table 2.8. Whereas 42 percent of those persons with under $10,000 in income worried a lot about money, only 13 percent of those with incomes above $50,000 worried a lot about money.

Respondents were grouped by whether they worried about money and the size of their contributions as shown in Table 2.8. Giving patterns somewhat reflected respondents' worry about money. A higher percentage of respondents who had no worry about money (55 percent) or only a little (54 percent) gave $250 or more to charity than those who worried a moderate amount about money (48 percent) or a lot (30 percent).

Forty-four percent of those who worried a lot about money gave $100 or less to charity in 1984. However, about the same percentage (around 30 percent) of

*See Table 2.1

those who responded that they had no worry about money, or worried only a moderate amount or a little gave $100 or less to charity in 1984.

This survey shows that worrying a lot about money tends to affect those with lower incomes and does have some relation to giving. A higher proportion of those who do not worry about money or who do not worry a lot tend to be substantial givers compared to those who do worry a lot about having enough money in the future.

Respondents were grouped by age and by their responses to whether they worried about having enough money in the future. Table 2.9 shows the responses for respondents under 35 years of age and between 35 and 64 years of aged grouped by whether they gave below or above 2 percent of their income to charity. This particular table again demonstrates the difference in giving patterns between those under 35 years of age and those between 35 and 64 years of age.

Regardless of income, respondents under 35 years of age were far less likely to give 2 percent or more to charity than those between 35 and 64 years of age. Of those respondents in each age group who responded that they did not worry about having enough money, only 36 percent of those under 35 years of age gave more than 2 percent of their income to charity compared to 62 percent of those between 35 and 64 years of age.

Although in both age groups there was not a significant difference in giving among those who worried a lot about money, there were differences between those who worried a moderate amount or only a little. Regardless of the degree of worry about money only 31 percent of the respondents below 35 years of age gave 2 percent or more of their income compared to 50 percent or more of those respondents between 35 and 64 years of age. There is little overall difference in giving regardless of income for those under 35 years of age — that is approximately 31 percent of persons under 35 years of age give 2 percent or more of their income to charity, regardless of income. In fact, the proportion of those with under $30,000 of household income is higher for giving 2 percent or more to charity in most cases compared to those with above $30,000.

For persons between 35 and 64 years old, there is a much larger proportion of respondents who gave 2 percent or more of their income to charity. Of those who responded that they had no worry about having enough money in the future, 67 percent of those with incomes above $30,000 gave 2 percent or more of their income to charity compared to 55 percent of those with incomes under $30,000. The proportion of respondents who gave 2 percent or more to charity and responded that they worried a moderate amount or only a little about money was higher among those reporting household incomes under $30,000. However, in every category, a substantially higher proportion of persons between 35 and 64 years gave 2 percent or more to charity than did the under-35 age group.

Indicators of Charitable Giving

Finally, several variables that were looked at as potential indicators for giving in this survey were ranked in order of their potential for determining giving among all respondents under age 65, among age groups of under 35 years and between 35 and 64 years, and by income as shown in Table 2.10. There are some differences among variables by age and income that can be used as indicators of the profile of substantial givers that emerge from this survey.

Attending religious services nearly every week is the major determinant of those who give 2 or more percent of their income by age and by income, except for those between 35 and 64 years of age with under $30,000 in household income in which case it is the second most important determinant.

In spite of the fact that weekly attendance at religious services is an important indicator of substantial giving, a far lower proportion of persons under 35 years of age give 2 percent of their income or more (50 percent) compared to those between 35 and 64 years of age (73 percent). However, regular attendance at religious services may indicate that a larger proportion of persons under 35 may become more substantial givers as they grow older.

The second leading indicator of a person's proclivity to give more generously is whether the person perceives that he or she has a moderate or a lot of discretionary income. This is particularly important for persons in both age groups with incomes under $30,000. Discretionary income was the most important indicator for persons from 35 to 64 years of age in this income group. Sixty-three percent of respondents who perceived that they had a moderate amount or a lot of discretionary income gave 2 percent or more of their income to charity. For those in the under-35 age group, 39 percent of respondents gave 2 percent or more.

No worry about money, a good indicator for generosity in giving which correlates strongly with discretionary income, was the third ranking variable for giving 2 percent or more of income to charity. Among those between 35 and 64 years of age with

TABLE 2.10
PERCENT GIVING TWO PERCENT OR MORE OF THEIR INCOME TO CHARITY BY AGE, INCOME AND SELECTED VARIABLES TO DETERMINE GIVING

	Gave 2 Percent of Income or More							
	Under 35 Years of Age				35 to 64 Years of Age			
	Under $30,000		Above $30,000		Under $30,000		Above $30,000	
Variables by Ranking All Respondents Who Gave 2 Percent or More	Rank	(Percent of Respondents)	Rank	(Percent of Respondents)	Rank	(Percent of Respondents)	Rank	(Percent of Respondents)
1. Attend Church Weekly	1	50	1	49	2	59	1	73
2. Have a Moderate Amount or a Lot of Discretionary Income	2	39	4	34	1	63	3	66
3. No Worry About Money	4	37	3	34	5	55	2	67

5. Worry Moderately or Only a Little About Money	6	31	6	33	4	56	5	46
6. Attend Church Once or Twice Month	5	36	2	36	9	41	6	45
7. Yes — Worry About Money/General Response	7	30	7	28	7	47	7	45
8. Only Enough to Pay for Basic Necessities	8	29	8	25	8	45	9	31
9. Never Attend Church	9	10	9	18	6	47	10	29
10. Attend Church a Few Times a Year	10	9	10	11	10	32	8	39

Note: Ties resolved by carrying the calculations to additional decimal places with the exception of *worry moderately or only a little* and *volunteered in the past year* for *under 35 years of age* and *above $30,000*. For both variables, the number of cases to compute the percentages was the same for both numerator and denominator. The tie was resolved on the basis that *volunteered in the past year* had higher percentages of persons giving 2 percent or more of their income in the other categories.

over $30,000 in household income and no worry about money, 67 percent gave 2 percent or more of their income to charity. For the same age group with under $30,000, having to worry about money only moderately was an important indicator, for 56 percent of those respondents gave 2 percent or more. No worry about money and attending church once or twice a month were more important indicators of giving for the under-35 age group.

Volunteering ranked fourth as an indicator of giving 2 percent or more of one's income for respondents of both age groups with incomes under $30,000. Significantly, a much lower proportion of those who volunteered under 35 years of age (37 percent) gave more than 2 percent of their income to charity compared to those between 35 and 64 years of age (58 percent). Volunteering also ranked high as an indicator among those earning over $30,000, but again more volunteered in the 35- to 64-year-age group (55 percent) and in the under-35-year age group (33 percent).

This survey found certain behaviors and perceptions that seemed to result in more substantial giving by respondents. They were regular church attendance, having a moderate amount or a lot of discretionary income, having no or only some worry about having enough money in the future, and time spent volunteering. Although no worry about money is somewhat a function of income, a significantly higher proportion of respondents at all incomes and in all age groups, who perceived that they had discretionary money or little or no need to worry about money, gave 2 percent or more of their income to charity.

Other than some significant indicators to determine giving, this survey also found that on similar indicators, a much lower proportion of persons under 35, regardless of income, gave 2 percent or more of their income to charity. These findings suggest that persons under 35 years of age may have less commitment, or have a major potential to increase their giving in future years. Unfortunately, there is very little research that charts the change of people's giving habits by age and income. These findings suggest the need for further study, however, to identify and chart changing giving trends among persons under 35 years of age.

3. Why and How Do Large Donors Give to Charitable Causes?

A series of additional questions were asked of the 23 percent of respondents who reported giving $500 or more to charity in 1984. These questions related to the kinds of charities they supported, how much and how regularly they gave to charities, and what kind of solicitations they were most likely to respond to. Finally, donors were asked what motivated them to give to their favorite charities.

This select group of respondents was read a list of specific charities or kinds of charities they contributed to in the past year. Table 3.0 shows their response and the mean contribution given by type of charity. Sixty percent or more of these respondents reported giving to United Way, another medical charity, or another social welfare organization. Forty-two percent responded giving to international charity, but so many respondents reported giving to charity for famine relief in Ethiopia, these numbers should be viewed with some caution and not looked at as a trend.

Educational charity, arts and culture, and hospitals had a smaller proportion of donors, although mean contributions to colleges and universities and other educational charities were higher than for any other charities. The second highest mean contributions went to United Way and arts and cultural institutions. Average contributions were lowest for environmental groups ($40).

Table 3.1 shows the percentage of large donors giving to various charities by size of contribution. Clearly, a majority of respondents gave below $50 to the environmental groups (86 percent), to other charities associated with arts and culture (70 percent), to medical charities (69 percent), to international charities (64 percent), to public radio and television (62 percent), and to social welfare organizations other than United Way (59 percent).

On the other hand, those charities that received the largest proportion of donors contributing more than $250 were hospitals (21 percent), United Way (20 percent), colleges and universities (18 percent), other social welfare organizations (13 percent), and other educational charities (12 percent).

Respondents also were asked to name the charity to which their largest contribution was given and the amount of that contribution. Table 3.2 shows that 30 percent of donors who gave $500 or more to charity gave their largest contribution to United Way, 18 percent to other social welfare organizations, 15 percent to other charities, and 9 percent each to international and educational charities. A much smaller propor-

tion of donors gave their largest contribution to hospitals, public television or radio, arts and cultural organizations, or environmental organizations.*

Although a significantly larger proportion of respondents reported giving their largest contributions to United Way and other social welfare organizations, when the mean contributions for contributors for each organization is tallied, a different rank ordering emerges. Educational charities received the highest mean donation of $390. These are followed by donations to other social welfare organizations and hospitals ($370), and United Way at $330.

Essentially almost half of the large donors gave their largest single contribution to United Way and other social welfare organizations. However, the largest mean contributions given by a smaller proportion of donors were given to religion followed by educational institutions.

TABLE 3.2
CHARITABLE ORGANIZATIONS TO WHICH THE LARGEST CONTRIBUTION WAS GIVEN

	Total (Percent)	Mean Contribution
United Way	30	$ 330
Other Social Welfare Organizations	18	370
Medical Charities	15	180

Public Television or Radio	3	170
Arts and Culture	**	
Environment	**	

**Less than 0.5 percent or mean contribution is not calculated.

Large donors were asked how regularly on a year-to-year basis they gave to their best-supported charity. Figure 3.0 shows that respondents reported that the best-supported charities on an annual basis are United Way (91 percent), education (89 percent), and medical charities (71 percent). Less than half of respondents reported that they contributed on an annual basis to hospitals, public television or radio, or other social welfare organizations.

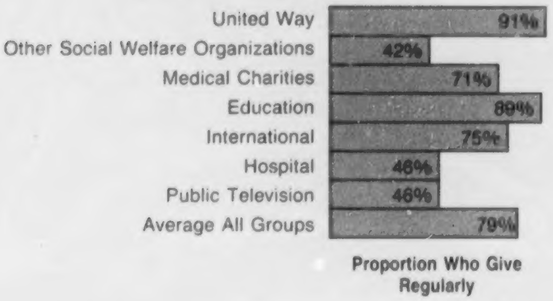
Then these respondents were asked how they came to give to their favorite charities by name of charity

---

*As this study shows, most Americans give the largest amount of money in contributions to religious charities. Since the purpose of this study was to gather information about other kinds of giving, interviewers were instructed to have respondents report about nonreligious giving in this question. However, 11 percent of interviewees still named a religious charity.

that they supported. They were asked whether they volunteered on their own, responded to being asked by someone, responded to a letter, a company campaign, an advertisement, the media, or some other way. Table 3.3 shows the response to these questions by type of charity. Overall, 40 percent of the large donors responded that they volunteered on their own to give to their best-supported charity, and 32 percent responded that they gave because they were asked. Respondents were less likely to give large donations through company drives, or responding to advertisements or letters. However, the responses varied by types of charities.

FIGURE 3.0
PROPORTION WHO GIVE REGULARLY TO BEST-SUPPORTED CHARITIES



Religious charities, hospitals, other social welfare organizations, medical charities, and educational charities were most likely to receive their largest donations because respondents had volunteered on their own or responded to a letter. United Ways were likely to receive their largest donations because people were asked or through a drive at work, while public television and radio received their largest donations because respondents responded to an advertisement or volunteered to contribute.

The responses to this question revealed that many large donors (40 percent) want to give and seek out their cause. Although asking someone to give is clearly the next most successful way of receiving donations, various charities have developed a variety of solicitation methods that are more successful for that specific charity. Generally, responding to a request in a letter was not a popular form of solicitation, except for educational institutions where 32 percent of respondents reported giving donations after receiving a letter, and hospitals where 20 percent of respondents contributed after receiving a letter. Advertising was less likely to reach donors, except for international charities and public television and radio. Company drives are unique to United Way and are an effective form of solicitation, although asking personally was far more effective for United Way donors.

Then respondents were asked which approach they would most likely respond to when asked by a charity to make a donation. Figure 3.1 shows that in an overwhelming majority of cases, 77 percent of respondents reported that being asked by someone they knew well was the best approach. The next most effective way was being asked at work in 47 percent of the cases, or being asked when someone comes to the door in 30 percent of the cases.

On the other hand, the least effective forms of solicitation were newspaper or magazine advertisements for 72 percent of the respondents, receiving a telephone call for 68 percent of the respondents, or responding to a television commercial for 65 percent of the respondents.

This survey confirms that the best form of solicitation is to be asked personally. However, in terms of how donors choose their favorite charity, a unique finding is that 40 percent of the respondents gave their gift to their favorite charity without being solicited.

TABLE 3.3
HOW RESPONDENTS CAME TO GIVE TO BEST-SUPPORTED CHARITIES

Form of Solicitation	Total %	United Way %	Other Social Welfare Organizations %	Medical Charities %	Religious Charities %	Education %	International %	Hospital %	Public TV/Radio %
Volunteered on Own	40	20	43	39	79	36	38	47	30

Being Asked to Give by Someone You Know Well

Being Asked to Give in a Telethon or Radiothon

Being Asked at Work to Give

Receiving a Phone Call Asking You to Give

Someone Coming to the Door Asking You to Give

Seeing a Television Commercial Asking You to Give

Receiving a Letter Asking You to Give

Reading a Newspaper or Magazine Advertisement Asking You to Give

Question: "People are asked to give to charitable organizations through a variety of means — in letters, telephone calls, and so forth. Which of these approaches would you say you are most likely to respond to? On a scale of 1 to 5, where '5' means most likely and '1' means least likely — how would you rate?"

Motivations for Giving Among Large Donors

Donors who contributed $500 or more to charity were asked to give the main reason why they gave to a particular charity, and then asked if they had any other reasons for giving to this charity. Table 3.4 shows the overall responses to these questions. Clearly, people give for many reasons, but almost half reported that they gave because the cause or group was worthy, or that the charity helped the poor and needy, that it was deductible from salary, or that the respondent had a close involvement or loyalty to the organization.

The overall motivations for giving to a charity varied somewhat by type of charity as shown on Table 3.5. The primary reasons donors give to other social welfare organizations and hospitals is because they believe they are supporting a worthy cause and helping the poor and needy. For other medical charities, the primary reasons for donating are the death or illness of a personal friend or relative and because it is a worthy cause.

On the other hand, the primary reasons given for supporting United Ways are the payroll deductibility from salary or the ease of giving and the fact that United Ways provide money for many causes. Respondents who contributed to public television or radio felt that it was a well-administered organization, as well as a worthy cause.

Donors to educational charities reported that their primary motives were loyalty to the organization and that they were supporting a worthy cause. Donors supporting international charities reported that helping the poor and needy and feelings of obligation were major reasons for their contributions.

As expected, the primary reasons for supporting religious charities were for spiritual reasons and feelings of obligation, although helping the poor and needy was also important.

Responding to an appeal only showed up as a third or fourth reason for giving among donors to medical and international charities. Close involvement or loyalty to the organization appeared to be an important reason for giving to education, other social welfare organizations, hospitals, public television and radio, and religious organizations.

Essentially, respondents showed a variety of motivations for giving depending on the type of charity they supported. Clearly, most charities were supported because they were worthy causes, helped the poor and needy, or because the donor had a close personal involvement or loyalty to the organization. United Ways were supported primarily because it was convenient to give — salary deductibility — and because they gave to many causes.

4. The Relationship of Volunteer Time to Giving

Respondents were asked about their time involvement in volunteer work and community activities. Then their giving behavior was analyzed based on whether or not they volunteered.*

Overall, 47 percent of the respondents reported they volunteered in 1984 confirming previous studies; however, there seemed to be a decline in females' volunteering compared to earlier studies. Table 4.0 shows that 48 percent of the males and 45 percent of the female respondents were active in volunteer work last year. Over half of adults between 30 and 49 years of age volunteered. There was some decline in the percentage of adults who volunteered as age increased. Forty-seven percent of those respondents between 50 and 64 years of age volunteered while slightly more than a third (36 percent) of adults 65 years and older volunteered.

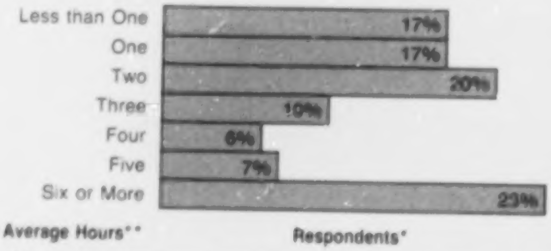
TABLE 4.0
PARTICIPATION IN VOLUNTEER WORK: 1984

Proportion Active in Volunteer Work in the Past Year	Respondents (Percent)
All	47
Sex	
Men	48
Women	45
Age	
Under 30 Years	44
30-34 Years	51
35-49 Years	53
50-64 Years	47
65 Years and Older	36
Income	
Under $10,000	38
$10,000 – $19,999	44
$20,000 – $29,999	47
$30,000 – $39,999	58
$40,000 – $49,999	52
$50,000 and Above	54
Marital Status	
Married	49
Single	48
Divorced, Separated	41
Widowed	35

Volunteer time is somewhat associated with income. While 38 percent of the respondents with incomes under $10,000 volunteered, over 50 percent of the respondents with incomes of $30,000 or above volunteered. Although just about half of those who are either single or married volunteered, those who were divorced or separated or widowed were less likely to volunteer.

Respondents were asked for the last year to estimate the number of hours per week they spent in volunteer activity. Thirty-four percent of those who volunteered reported that they gave an hour or less of volunteer time per week as shown in Figure 4.0. Thirty percent gave two or three hours per week, and 36 percent devoted four or more hours a week to volunteer activity.

FIGURE 4.0
HOURS PER WEEK SPENT IN VOLUNTEER WORK



*Among respondents who reported that they volunteered last year.

**Hours shown in terms of class intervals in this report, unless otherwise specified, represent midpoints of their respective intervals, e.g., less than one hour = less than 0.50 hour, 1 hour = 0.50 hour-1.49 hours, 2 hours = 1.50 hours-2.49 hours, etc.

---

*The findings in this section should be viewed with some caution because respondents were asked to remember their volunteer activities over a year. They were not asked about their specific volunteer activities nor for which organizations they volunteered.

Respondents were also asked how active or involved they were in community or neighborhood activities in the last year. Fourteen percent of the respondents reported that they were very active, 18 percent reported that they were fairly active, and 30 percent reported that they were only somewhat active; 38 percent reported that they were not active at all (Figure 4.1).

FIGURE 4.1
DEGREE OF INVOLVEMENT IN COMMUNITY ACTIVITIES

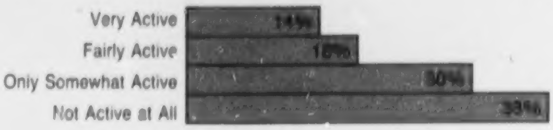


FIGURE 4.2
RELATION BETWEEN COMMUNITY INVOLVEMENT AND PARTICIPATION IN VOLUNTEER WORK

RELATION BETWEEN VOLUNTEER WORK AND CHARITABLE GIVING

	Participation in Volunteer Work		Hours Spent Volunteer Work	
	Yes	No	Less than 3 Hours	More than 3 Hours
All Respondents				
Mean Contribution	$830	$510	$700	$1,020
Mean Percentage of Income	2.8	2.0	2.3	3.6
Givers Only				
Mean Contribution	$880	$600	$720	$1,110
Mean Percentage of Income	2.9	2.2	2.4	3.5

In Figure 4.2, the relationships of volunteer time to community involvement, attendance at religious services, and charitable contributions are summarized. Persons were likely to volunteer more if they were active in community affairs. Seventy-two percent of respondents who reported that they were very active in community affairs contributed volunteer time, while only 30 percent of the respondents who reported they were not active at all contributed volunteer time. There is a clear relationship with the level of community involvement and the contribution of volunteer time.

There is some relation between attendance at church services and volunteer time, but the relationship is not as strong as community involvement. Fifty-six percent of those respondents who reported attending religious services once a week also reported contributing volunteer time, while 33 percent of those respondents who reported that they never attended religious services volunteered.

Table 4.1 compares the distribution of total giving by size of contribution and whether persons volunteered or not. A higher percentage of those who were low-level givers ($100 or less) also did not volunteer. For contributions of $100 or more, a higher percentage of respondents who volunteered contributed than did those who did not volunteer.

Forty-two percent of respondents who did not volunteer gave either nothing or under $100 to charity compared to 23 percent of respondents who volunteered. Forty-one percent of the respondents who did not volunteer gave more than $250 to charity compared to 58 percent of the respondents who volunteered.

This survey reconfirmed what previous national surveys have shown — that there is a relationship between volunteer time and giving. Giving increases among those who are involved as volunteers, and giving generally increases as the amount of volunteer time increases. The mean contribution was $830 for those respondents who reported that they volunteered compared to $510 for those respondents who did no volunteer work. Those respondents who reported contributing less than three hours a week gave an average contribution of $700 while those respondents who contributed three or more hours a week gave a mean contribution of $1,020. Essentially, those who volunteereed on average less than three hours per week contributed more than one-third more money to charity than those who did not volunteer at all, while those who volunteered three or more hours per week on average gave twice as much money to charity as those respondents who did not volunteer.

TABLE 4.1
TOTAL GIVING TO CHARITIES BY VOLUNTEER STATUS IN THE PAST YEAR

Size of Contribution	All Respondents (Percent)	Volunteered (Percent)	Did Not Volunteer (Percent)
None	11	6	16

Mean Contribution	$ 650	$ 830	$ 510
Mean Percentage of Income	2.4	2.8	2.0

5. What are the Characteristics of Religious Givers?

One of the purposes of this survey was to examine whether there is a relationship between religious giving and giving to other charities. To examine this issue respondents were asked whether they gave to a church or synagogue in the past year, and whether they tried to give a specific amount or pledge a certain percentage of their income to religious charities. Then the respondents were asked how regularly they attended religious services, and whether or not they pledged a specific amount to the church.

Seventy-two percent of the respondents (Table 5.0) reported that they contributed to a church or synagogue. The average contribution to religion for all respondents was $470, while the average contribution for religious givers only was $660. Thirteen percent of the respondents who gave to religious institutions reported contributing from $1 to $50, 15 percent from $51 to $100, 20 percent from $101 to $250, 23 percent from $251 to $500, 14 percent from $501 to $1,000, and 15 percent gave $1,000 or more.

TABLE 5.0
CONTRIBUTIONS GIVEN TO RELIGIOUS CHARITIES

Amount Given to Religious Charity in the Past Year*		All Respondents (Percent)	Givers Only (Percent)
None		28	—
$ 1 - $ 50		9	13
$ 51 - $ 100		11	15
$ 101 - $ 250		14	20

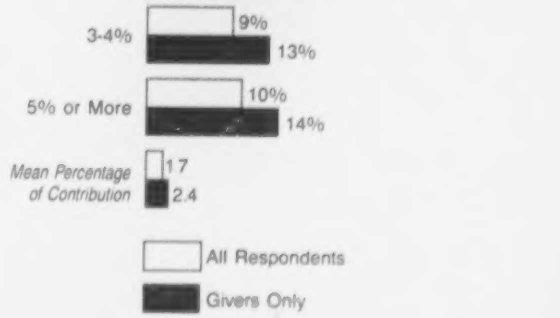
More than $2,000		4	6
	Total =	100	100
Mean Contribution		$470	$660

Dash = Not Applicable

*Although 75 percent of total respondents reported that they contributed to a church or synagogue, these tables have been adjusted to exclude respondents who say they gave to religious charity in the past year, but did not report the specific amount.

When the amount contributed to religion was figured as a percentage of income, as shown in Figure 5.0, it was found that among religious givers 22 percent contributed less than one percent of their income to a church or synagogue, and 37 percent contributed one percent. Twenty-seven percent contributed 2 to 4 percent of their income while 14 percent gave 5 percent or more of their income to religious charities.

FIGURE 5.0
PERCENTAGE OF INCOME GIVEN TO RELIGIOUS CHARITY*



*Income percentages shown in terms of class intervals in this report, unless otherwise specified, represent midpoints of their respective intervals, e.g., less than 1 percent = less than 0.49 percent, 1 percent = 0.50 percent-1.49 percent, 5 percent or more = 4.50 percent or more.

**Not Applicable for Givers Only.

Religious Giving and Income

Religious giving has a relationship to income, especially in the amount of the gift given. For example, Table 5.1 shows that 45 percent of respondents with incomes under $10,000 made no contributions to religion, while only 13 percent of respondents with incomes over $50,000 reported making no religious contribution. While only 8 percent of those with incomes under $10,000 gave more than $250 to a church or synagogue, almost 70 percent of those making over $50,000 contributed more than $250.

For those reporting as having made a contribution to religious charities, the amount they contributed as a percentage of income tells a slightly different story. Fully, 18 percent of those reporting with incomes under $10,000 contributed 2 percent or more of their income to religion. For respondents with incomes between $10,000 and $50,000, slightly more than 30 percent contributed 2 percent or more of their income to religion, and for those with household incomes of $50,000 or above, 37 percent contributed 2 percent or more of their income to religion. What Table 5.1 shows, however, is a tremendous range in both the amount and percentage of income contributed to religion, regardless of income level.

Religious Giving and Age

Religious giving tends to increase with age both in the amounts given and as a percentage of income, indicating a sustained level of generosity even if, for example, average total income drops after 65 years of age. The most generous givers to religion are between 35 and 49 years old or 65 years and older. Thirty-three percent of each of these groups gave 2 percent or more of their income to religious institutions, as shown in Table 5.2.

Persons from 50 to 64 years and older gave a smaller average contribution ($570) compared to the 35- to 49-year-old group ($660) and 29 percent of this group gave 2 percent or more. However, as shown in Section 1, Table 1.1, persons from 50 to 64 gave the largest contributions to other charities of all other age

TABLE 5.1

groups, both in mean contribution ($300) and as a percentage of income (one percent) confirming findings from previous surveys that the persons in this age group are at their most societally conscious.

Religious Giving and Marital Status

Clearly, being either married or widowed is a determinant of the percentage of income that is given to religion. Those who are divorced or separated gave a smaller percentage of their income to religion as did those who were single. These demographic characteristics reconfirm the findings of other surveys as shown in Figure 5.1.

Attendance at Religious Services and Giving

One of the unique aspects of this survey was to look at the relationship of church attendance to giving to religion and other charities.

FIGURE 5.1
RELIGIOUS GIVING AND MARITAL STATUS

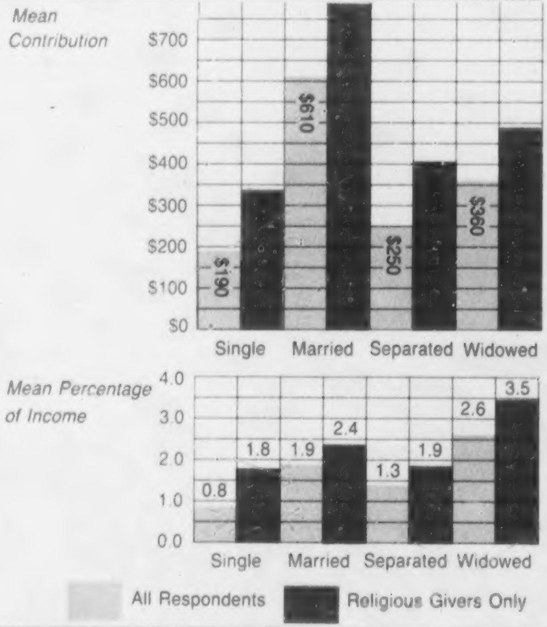

TABLE 5.3
CHURCH ATTENDANCE AND GIVING: 1984

Church Attendance (Respondents)	Percent of Total	Contributions						
		Average			As Percentage of Income			
		Total	Religious Charities	Other Charities	Total	Religious Charities	Other Charities	Average Income
All	100	$650	$470	$180	2.4%	1.7%	0.7%	$27,300
Every or Nearly Every Week	44	990	840	170	3.6	3.1	0.6	27,400
Once or Twice a Month	15	510	330	180	2.0	1.3	0.7	26,000
Only a Few Times a Year	27	400	210	180	1.4	0.7	0.6	28,600
Never	14	300	70	230	1.1	0.2	0.9	26,400

Table 5.3 shows that 44 percent of the respondents reported attending church each week, 15 percent once or twice a month, 27 percent only a few times a year, and 14 percent never attend.

The findings of this survey show a clear relationship between church attendance and total giving. Total giving for the person who attended church weekly was on average more than three times as great ($990) than for the person who did not attend church at all ($300). This was true not only in the average contribution, but also as a percentage of income. Persons who attended church weekly gave 3.6 percent of their income to charity compared to 1.1 percent for those who do not attend church at all. Persons who attended church once or twice a month gave slightly more than half the amount, or $510, of those who attended weekly.

Church attendance clearly has an impact on the amount of giving to religious charities as shown in Table 5.4. Sixty-one percent of those who attended religious services nearly every week gave $250 or more to the church compared to 34 percent who attended religious services once or twice a month, 20 percent who attended a few times a years and 8 percent who never attended services.

There also is a strong relationship between attendance at religious services and the percentage of income given to religious charities. Of those who attended church weekly, 51 percent gave 2 percent or more of their income to religious institutions, compared to 29 percent who attended church once or twice a month, 9 percent who attended a few times a year, and 4 percent who did not attend at all. A person who attended church weekly was five times as likely to give 2 percent or more of his income to a church or synagogue as the person who attended services only a few times a year.

Religious Giving and Contributing a Fixed Amount or a Fixed Portion of Income

Religious givers were asked whether they pledged or gave a fixed proportion of their income each week or annually to their church or synagogue or whether they decided what to give each time they attended services. The purpose of these questions was to determine how many respondents planned their giving and what relationship planned giving had to the amount of giving.

Table 5.5 shows that 42 percent of religious givers reported that they gave or pledged a fixed amount to their church or synagogue each week. Their average contribution ($880) was almost twice as much ($460) as the 54 percent of those who did not pledge a fixed amount. Those religious givers who pledged also gave a higher proportion of their income to religion (2.9 percent) compared to those who did not pledge (1.8 percent).

The giving patterns of the 30 percent of respondents who tried to give a certain proportion of their income each year to their church or synagogue were even more dramatic. Those respondents gave an average contribution of $1,210 which was almost three times as much ($440) as the 70 percent of respondents who reported that they did not plan to give a certain proportion of their income each year. Respondents who pledged a proportion of income to their church or synagogue also gave three times as much as a percentage of income, 4.6 percent, compared to 1.5 percent for those who did not pledge.

Table 5.6 provides a summary of the impact on individual giving based on frequency of attendance at

Total =	100		

religious services and planned giving. The most generous giver to a church is one who attends nearly every week and pledges a proportion of his or her income to the church. These respondents gave a mean contribution of $1,300 and approximately 5 percent of their income to the church. The average amount given from this group was more than twice as much as those who attended church weekly but pledged neither a specific amount nor a specific proportion of their income.

Other than weekly attendance at religious services, givers who pledged a proportion of their income were likely to give more than those who attended church monthly or a few times a year. That is, for the most generous giver both weekly attendance and pledging substantially increased their annual contributions to a church or synagogue. Otherwise, a distinguishing factor to increase giving is pledging either a dollar amount or a proportion of income.

Do Not Give a Percentage of Their Income	330	1.0

6. What Are the Characteristics of Givers to Other Charities?

Respondents were asked the same questions about giving to other charities as they had been about religion. They were asked how much they had contributed to other charities in the past year and whether they tried to give a specific amount or pledge a certain percentage of their incomes to other charities.

Sixty-nine percent of the respondents (Figure 6.0) reported contributing to other than religious charities in 1984. The average contribution for all respondents was $180 while the average contribution for givers only was $270. Thirty-three percent of the respondents who reported giving to other charities gave from $1 to $50, 20 percent gave from $51 to $100, 23 percent gave from $101 to $250, 16 percent gave from $251 to $500 and 8 percent gave $500 or more.

Overall, respondents gave about 0.7 percent of their household income to other charities. Figure 6.1 shows that when contributions were totalled and taken as a percentage of income, 70 percent of those who gave to other charities gave less than one percent of their income, 23 percent gave between one and two percent and 7 percent gave two percent or more.

*Although 73 percent of respondents reported making contributions to other charities, the adjusted percentages in this table exclude respondents who said they gave to other charities in the past year, but did not report the specific amount.

Giving to Other than Religious Charities and Income

Giving to other charities is influenced by income. While nearly 60 percent of persons with income below $10,000 reported not giving to other charities, only 7 percent of those with incomes of $50,000 or more reported not giving to other charities as shown in Table 6.0. Although the amounts given to charities increased with income, as a percentage of income among givers, there is only a slight variation among income groups, except for those with incomes over $50,000.

Giving to other charities as a percentage of income increased with income. For the higher income group, the mean percentage of contributions among those who gave was 1.2. Although the majority of givers to other charities gave less than one percent of their income to other charities, a small proportion of generous givers who gave 2 percent or more to other charities could be found at all income levels.

Giving to Other Charities and Age

The largest proportion of givers to other charities both in amount of gift and proportion of income are from 35 to 64 years old as shown in Table 6.1. Over one-third of those respondents below 30 years old and nearly half of those respondents who were 65 years and older reported giving no contributions to other charities. Only 5 percent of those groups of respondents reported giving more than $250 to other charities. Again, a small proportion of all respondents in each age group reported giving 2 percent or more of their income to other charities.

Among all respondents those persons between 50 and 64 years of age tended to give a higher percentage of their income to other charities (one percent) compared to other age groups. Among those elderly who gave to other charities, they gave about 0.7 percent of their income which was only slightly less than the 0.8 percent of income of those who gave to other charities between the ages of 30 to 49 years. Persons under 30 years of age gave the least to charity as a percentage of income.

Generous givers to other charities also came from the 35-64-year age group. Ten percent of those persons between 35 and 49 gave 2 percent or more of their income to other charities as did 11 percent of respondents between 50 and 64 years of age. Approximately 5 percent of those respondents over 65 years of age gave 2 percent or more of their income to

other charities, while 6 percent of those between 30 and 34 years of age and 2 percent of those under 30 years gave 2 percent or more.

Giving to Other Charities and Marital Status

Figure 6.2 shows that givers who were married gave a larger amount (\$310) on average to charities, compared to those who were divorced or separated (\$270). Donors who gave least to other charities were widowed (\$140).

Giving as a percentage of income did not vary much by marital status, except for those who were widowed. The percentage of income ranged from 0.7 to 0.8 by marital status and at 0.6 for widowed persons among those respondents who gave to other charities.

Total =	100		

7. The Relationship of Religious Giving to Other Giving

One of the purposes of this survey was to look at the relationship of religious giving to nonreligious giving. Generally, those who give generously to religion also give generously to other charities. As was discussed in the last section, a substantially larger proportion of respondents pledged either a dollar amount or a percentage of income to their church or synagogue. Because of that difference as givers become more generous, they tend to give a larger proportion of their gifts to religion. Generally, slightly more than 70 percent of all contributions went to religious charities. Again, one must view these findings with some caution, since respondents were not asked what proportion of their gifts to a church or synagogue were given to support nonsacramental church activities, such as education, aid to the poor, etc.

Table 7.0 shows the relationships of giving to other charities and religion. Generally, if persons gave nothing to other charities, they gave a mean contribution of $380 to religious charities. If, on the other hand, persons gave no contribution to religion, they gave a mean contribution of $290 to other charities. The reverse is also true. As contributions to other charities increase, so do contributions to religious charities. For example, Table 7.0 shows that if persons gave $250 to $500 to other charities, they gave an average contribution of $1,020 to religious charities. If they gave from $500 to $1,000 to religious charities, they gave an average contribution of $370 to other charities.

When one looks at giving to religion by various demographic characteristics on Table 7.1, a few interesting characteristics emerge. The proportion of giving to religious charities by income is fairly stable up to $40,000. Persons with incomes above $50,000 give the lowest proportion (61 percent) of their total giving to religion, indicating that as incomes go up, respondents increase their giving to other charities.

There is little variation in the proportion of total giving to religion by persons below 50 years of age. However, the proportion declines to 65 percent of total giving to religion among these between 50 and 64 years of age. As shown in Table 1.1, persons in this age group give a higher proportion of their income to other charities than in any other age group. Persons over 65 years of age give the highest proportion of their income to religious charity (85 percent).

There are only slight differences noticed in giving to charity by race and religion, although Protestants give a slightly higher proportion of their income (75 percent) to religious charities than Catholics (71 percent). Persons who are widowed give the highest proportion of their total giving to religious charities (84 percent) followed by married persons (73 percent). Single persons and those who are divorced and separated tend to give a lower proportion, about

60 percent, of their total contributions to religious charities.

Education and occupational status are apparently linked indicators of proportionate giving to religion and other charities. Persons with higher degrees and who are in professional jobs or business managers give a lower proportion of their contributions to religion and a higher proportion, over 30 percent, of their contributions to other charities.

Frequency of attendance at religious services is a good indicator of the proportion of total contributions going to religious charities. The proportion of total contributions going to religious charities increases with involvement in the church. Those who never attended religious services gave 23 percent of their total contributions to religious charities, while those who attended weekly gave 85 percent.

What emerges from these demographic characteristics is that significant indicators of giving to religious charities as a proportion of total giving are regular church attendance, less than a high school education, and age (over 65 years old).

In order to explore further the relationship of religious giving to giving to other charities, in addition to being asked how important religion was in their lives, respondents were asked how much their religious beliefs influenced their giving to other charities, and what influence their religious beliefs had on their giving to specific other charities.

Only 25 percent of respondents reported that their religious beliefs had any influence on their giving to other charities, and only 15 percent of the respondents reported that their religious beliefs either greatly influenced or moderately influenced their giving to other charities. Both groups of respondents reported a mean contribution of $270 to other charities. Where religious convictions were important, however, the average contribution to the church was $910 compared to $440 for those who responded that their giving to other charities was not influenced by their religious beliefs as shown in Table 7.2.

Among the group that responded that their religious convictions had an impact on their giving to other charities, 80 percent responded that they were more likely to give to charities that help the poor (Table 7.3).

The other charities they were most likely to support were those that helped the poor in other countries and medical charities. This group of respondents looked very different from respondents as a whole where 20 percent or less indicated that their religious convictions had any influence on their giving to charities that helped the poor either here or abroad, or medical charities or education.

On the whole, the survey results did not show a clear relationship between giving to religion and giving to other charities. What it did show was that those who were very involved in their church or synagogue gave more generously to religious charities.

8. The Capacity to Give and Public Attitudes Toward Charitable Giving

An underlying purpose of this survey was to determine whether or not there was a capacity for individuals to increase their giving and volunteering. Previous sections on this report summarized how much people reported they gave and the relationship of giving to various demographic, behavioral, and perceptual characteristics of respondents. This section addresses a series of questions about how respondents believe their giving compares with others, and whether they think they are giving enough. Finally, respondents were asked about their attitudes toward charitable giving and volunteering in order to evaluate the climate for giving and volunteering.

Respondents were asked whether they thought they gave more, less, or about the same to charity compared to people like themselves. Table 8.0 shows that 16 percent of respondents thought they were giving more than others like themselves, almost half of respondents thought they were giving the same, and 14 percent thought they were giving less. However, more than one out of five respondents were not sure how their giving compared to others.

COMPARISON OF CHARITABLE GIVING AMONG AMERICANS WITH DIFFERENT PERCEPTIONS OF HOW THEIR GIVING COMPARES WITH OTHERS

	Think They Are Giving:		
	More	About the Same	Less
All Respondents			
Mean Contribution	$1,350	$500	$270
Mean Percentage of Income	3.5	1.8	1.3
Givers Only			
Mean Contribution	$1,360	$550	$370
Mean Percentage of Income	3.5	2.0	1.8

People's perceptions of their giving to others reflected in their mean contribution. Those who thought they were giving more had the highest mean contribution — $1,350 — and gave an average of 3.5 percent of their income to charity. Those who thought they gave about the same gave an average of $500, and those who thought they were giving less than others like themselves had a mean contribution of $270.

When people's perceptions of how their giving compares with others are examined by income and age, a few interesting differences emerge as shown on Table 8.1. A larger proportion of persons with incomes below $20,000 responded that they thought they were giving less to charity than their peers. Almost one out of five in most income groups are not sure how their giving compares to others like themselves.

The differences by age also are interesting. A larger proportion of persons under 35 years of age think they are giving the same as others like themselves, and a much lower percentage of respondents in these age groups are unsure of how their giving compares with others. On the other hand, a much larger proportion of persons older than 35 years of

TABLE 8.1
HOW AMERICANS COMPARE THEIR GIVING WITH OTHERS BY INCOME AND AGE

	More (Percent)	Less (Percent)	About the Same (Percent)	Not Sure Percent)
Income				
Under $10,000	10	22	46	22
$10,000 - $19,999	8	18	56	18
$20,000 - $29,999	18	9	55	18
$30,000 - $39,999	25	7	49	19
$40,000 - $49,999	13	9	57	21

65 Years and Older	11	12	45	32

Note: Percentages read horizontally.

age is unsure about how their giving compares with others. Almost a third of the respondents over 65 years of age were not sure how their giving compared with others like themselves.

When respondents were grouped by their levels of giving as shown in Figure 8.0, a much higher proportion of low-level givers (26 percent) were unsure about how their giving compared to others than were mid-level and substantial givers (17 percent). In general, about half of all givers in each group thought they were giving about the same as others like themselves. More substantial givers thought they were giving more than others while a high proportion of low-level givers responded that they were giving less than others like themselves.

The responses to the question on level of giving revealed that a significant proportion of respondents did not know how their giving compared to others like themselves. Respondents were then asked whether they thought they were giving as much as they should to charity (Table 8.2). Fifty-eight percent of all respondents believed they were giving as much as they should while 38 percent responded they were not giving enough and 4 percent were unsure. When those respondents who thought they were not giving as much as they should were broken down by income and age (Table 8.3) 40 percent or more of the respondents with incomes above $20,000 thought that they should be giving more to charity. A smaller proportion of those over 65 (32 percent) responded that they should be giving more to charity.

65 Years and Older	32

When respondents to this question were broken down by giving level, the answers revealed that more low-level givers (46 percent) thought they should be giving more compared to mid-level givers (40 percent) and substantial givers (37 percent) as shown in Figure 8.1. However, almost two-fifths of substantial givers still believed that they should be giving more to charity.

Finally, respondents were read a list of possible reasons why they had not given more to charity and asked whether these reasons applied or did not apply to them. Respondents responses to these questions are summarized on Table 8.4. A majority of respondents (63 percent) responded that they did not give more to charity because they could not afford it. Nearly a quarter of respondents indicated that they did not get around to it. A surprising finding is that only 14 percent of respondents replied that they did not give more because no one asked them.

TABLE 8.4
REASONS FOR NOT GIVING MORE TO CHARITY

Reasons	Applies (Percent)	Does Not Apply (Percent)	Not Sure (Percent)
Because I Can't Afford to Give More	63	35	2
Because I Would Rather Spend My Money in Other Ways	29	70	1
Because I Didn't Get Around to It	23	76	1
Because No One Asked Me	14	85	1
Because I Don't Think There Are Any Charities That Deserve My Support	5	93	2

Note: Percentages read horizontally.

On the other hand, only 5 percent of respondents thought that there were no charities that deserved their support indicating that an overwhelming majority of respondents (93 percent) thought that there were charities worthy of their support. When asked if they would prefer to spend their money in other ways rather than giving to charity, 70 percent of respondents reported that that reason did not apply as shown in Table 8.4.

Generally, responses to this question showed that respondents had very positive attitudes toward charity, and that most respondents had not given more because they felt that they could not afford it.

Public Attitudes Toward Charity

Respondents were asked a series of questions about their attitudes on giving to charity, volunteering, and the role and responsibilities of government to fund the poor both here and abroad.

Table 8.5 shows the responses of Americans who were asked whether they agreed or disagreed that it is the responsibility of people to give what they can to charity. Overall, 81 percent of Americans agreed with the question. Slightly more women (84 percent) than men (79 percent) agreed with the statement. Proportionately more persons over 65 (87 percent) and under 30 years of age (83 percent) agreed than in other age groups. Almost 90 percent of those from the lowest and highest income groups agreed with the statement. Seventy-seven percent of those with incomes between $20,000 and $30,000 responded that they agreed with the statement. Overall, Americans have a pervasive belief that individuals should give what they can to charity.

$50,000 and Above	88	11	1

Note: Percentages read horizontally.

When asked whether they agreed that every person should volunteer some time to help those who are less well-off, 78 percent of all respondents agreed with this statement as shown in Table 8.6. Slightly more women (81 percent) than men (76 percent) agreed with this statement. By age, there was a slightly higher proportion of those over 65 years of age (83 percent) compared to persons under 30 years of age (74 percent) who agreed that every person should volunteer some of his time. Again, more of those at the lowest income range (below $10,000) and the highest income range (above $50,000) agreed that every person should volunteer some time compared to other income groups.

Note: Percentages read horizontally.

When those who responded to the question about volunteering were grouped by their opinions and their actual participation in volunteer work as shown in Table 8.7, of those who agreed with the question that every person should volunteer, 49 percent volunteered and 51 percent did not. Of those respondents who disagreed, 36 percent participated in volunteer work. When respondents who agreed and disagreed with the question are added together, 49 percent of respondents who had an opinion volunteered, 11 percent disagreed with the question and did not volunteer, and 40 percent agreed that every person should volunteer, but did not volunteer themselves.

The response to this question gives some indication that many more people feel they should volunteer

TABLE 8.7

than actually do volunteer. Furthermore, eight out of ten Americans believe that every person should give some volunteer time to help others who are less fortunate. Clearly, Americans believe overwhelmingly that individuals have a responsibility to give both money and time to help others.

Public Attitudes About Government Responsibility to Help the Less Fortunate

Respondents were asked whether they agreed that government had a basic responsibility to take care of people who cannot take care of themselves. As shown on Table 8.8, 77 percent of all respondents agreed with this statement. More respondents under 35 years of age (80 percent or more) agreed proportionately with this statement than respondents from other age groups. A higher percentage of people with incomes below $20,000 (80 percent or more) agreed with this statement than those with incomes above $50,000 (69 percent). However, a majority of Americans believed that it is a basic responsibility of government to take care of people who cannot care for themselves.

When asked whether they agreed that government should guarantee all citizens enough to eat and a place to live, respondents showed less agreement as shown on Table 8.9. Two-thirds of all respondents agreed with this question, but there was a fairly wide variation of responses by sex, age, and income. Seven out of ten females agreed with this statement compared to 61 percent of males. Although there was higher agreement among those under 30 years of age (77 percent) and those over 65 years of age (71 percent), only 58 percent of those between 35 and 49 years of age and 61 percent of those between 50 and 64 years of age agreed with this statement.

Note: Percentages read horizontally.

The proportion of those respondents agreeing that government has a basic responsibility to assure all citizens enough food and a place to live clearly declined as income increased. While 77 percent of those respondents with incomes under $10,000 agreed with this statement, only 55 percent of those with incomes over $50,000 agreed. Still more than half of all respondents at all income ranges agreed that government had a basic responsibility to guarantee all citizens enough to eat and a place to live.

When respondents were asked whether they thought that the government was spending too much to help the poor, a majority of Americans (66 percent) disagreed with the statement as shown on Table 8.10. However, there was a variation among responses by sex, age, and income. While 72 percent of women disagreed with the statement, only 60 percent of the males disagreed. Over three-quarters of respondents under 30 years of age disagreed with the statement which was higher than all other age groups. Such a response among younger people perhaps revealed that much of their youth was spent during a time when government spending for the poor was increasing.

TABLE 8.10

Note: Percentages read horizontally.

More persons with incomes below $30,000 disagreed with the statement than persons with incomes above $30,000. However, generally there was not as high a level of consensus about whether the government was spending too much on the poor (66 percent) as there was about the question that it is the government's responsibility to help those who cannot take care of themselves (77 percent).

When respondents were asked their opinion about whether it is better to help people you know in your own community than to help people elsewhere, there was even less consensus than expressed with respect to the government spending too much to help the poor (Table 8.11). Although 62 percent of respondents agreed with this question, there was a wide variation among respondents by age and income. Less than half of the respondents under 30 years of age agreed with this question compared to nearly three-quarters of respondents 65 years and older. On this question, the proportion of respondents who agreed increased by age. Part of the explanation for these differing views could be that persons under 35 years of age have grown up with an increasingly international economy than those from other age groups.

TABLE 8.11

Note: Percentages read horizontally.

Finally, respondents were asked two questions about whether individuals or government have an obligation to help the poor in other countries. Respondents were asked whether they agreed or disagreed with the statement that because Americans are so wealthy they have a special obligation to help the poor in other countries (Table 8.12). Over half (51 percent) of respondents disagreed with this statement. There was not much variation by age or income. A slightly lower proportion of the elderly (47 percent) and persons under 30 years of age (50 percent) disagreed with this question than in other age groups. A lower proportion of persons with higher incomes (44 percent) and persons with incomes under $10,000 (45 percent) disagreed with this statement. Essentially, Americans were fairly evenly divided about whether they have a responsibility to help the poor in other countries.

Respondents were even in less agreement when they were asked whether they agreed or disagreed that government has no special responsibility to spend money helping the poor in other countries (Table 8.13). Forty-seven percent of respondents agreed, 40 percent disagreed, and 13 percent were unsure.

Responses varied by sex, age, and income. While 50

percent of men agreed that government has no special responsibility to help the poor in other countries, only 44 percent of the women did. Agreement with this question increased by age. Whereas, almost half of persons under 35 disagreed with this statement, only 32 percent of persons over 65 years of age disagreed with this statement.

Fifty-four percent of persons with incomes under $10,000 agreed with this statement, while 54 percent of those with incomes of $50,000 or more disagreed. Essentially, those with lower incomes seemed to be more concerned about support at home first, while a larger proportion of respondents with higher incomes had a concern for the poor internationally.

9. Implications of the Study

The National Survey on the Charitable Behavior of Americans tested a limited series of hypotheses to begin to identify some key motivations and behaviors that influence giving. The survey also tried to determine whether there was a capacity for Americans to increase their giving and volunteering in the future.

The findings of the survey provide some valuable information about Americans giving behavior and some information about motivations for giving. Some of the unique findings of this study show:

1. Among the most pervasive values of Americans are that individuals should give as much as they can to charities *and that individuals should volunteer some of their time to help those who are less fortunate than themselves.*

2. Americans tend to give approximately 70 percent of their charitable dollars *to religious institutions and other religious causes and 30 percent to other charities.*

3. There does not seem to be a clear relationship between religious giving and giving to other charities; *however, those who give to both religion and other charities give a much higher total contribution than those who give only to other charities.*

4. There is a clear relationship between attendance at religious services and giving to religion. *Total contributions for those who attended church weekly was on average more than three times as great ($990) as for persons who did not attend church at all ($300).*

5. Although there were only a few questions about the relationship between volunteer

time and giving, *the study demonstrated a relationship between contributed time and giving. The average contribution of those who volunteered was $830 compared to $510 for those who did not volunteer.*

6. Discretionary income influences the amount persons give to charities. *Regardless of income, persons who perceive that they have a moderate amount of discretionary income give more than those who feel they only have enough income to pay for basic necessities.*

7. Persons who are very worried about their future economic well-being also tend to give less, *regardless of income, than persons who worry only a little or do not worry at all.*

8. Demographic characteristics have some influence on giving. *Persons who are married or widowed, have higher education, are Protestants, are in professional occupations, are between the ages of 50 and 64, and have higher incomes are among the most generous givers to both religious and other charities. Persons who have less education and are not in professional jobs tend to give less to charities, and most of their contributions go to religious charities. Persons over 65 years of age are among the most generous of givers, but they give most of their contributions to religious charities.*

9. Persons who pledge specific dollar amounts or percentages of incomes *to charities give two to three times as much on average to charities as those who do not pledge. While 42 percent of respondents reported they pledged specific dollar amounts to their churches each week and 30 percent responded that they tried to pledge certain proportions of their incomes to religious charities, less than 10 percent of Americans pledged either dollar amounts or proportions of their incomes to other charities. In those few cases, giving trends to other charities were similar to those for religious giving — that is, total giving to other charities was significantly higher among those who pledged an amount than those who did not.*

10. Large donors — those who contributed more than $500 to charities *— supported a variety of causes for different reasons. Although on average, the United Way received support from 64 percent of large donors and the average contribution was $210, the largest individual contributions, other than to religious charities, went to education ($390).*

11. Large donors give to charities for a variety of reasons *— including:*

(1) The charity was a worthy cause; (2) It helped the poor; (3) They could deduct their contributions from salary; (4) They felt a close involvement or loyalty to the organization.

12. When large donors were asked what solicitation approach they were most likely to respond to, *over 75 percent responded that they were likely to give when a person they knew well asked them to.*

13. When respondents were asked how they thought how their giving compared to their peers, *one out of five Americans did not know how their giving compared to their peers.*

14. There seems to be a capacity to increase giving *in America since almost two out of five Americans reported that they should have given more to charities.*

15. There seems to be a capacity to increase volunteering, *for 49 percent of respondents who believed that they should volunteer did not volunteer in 1984.*

16. There seemed to be a difference in the giving behavior between those under 35 years of age and other age groups *in the population. Even if those under 35 years of age never married, attended church regularly, had discretionary income, and had household incomes above $30,000, a substantially smaller proportion (50 percent) of that age group gave more than 2 percent of their incomes to charities compared to more than two-thirds of the 35- to 64-year-old age group with the same characteristics.*

General Conclusions

This study confirmed that an overwhelming majority believe that they should give and volunteer. It also showed that Americans who were actively involved in activities — either church attendance or volunteering — gave more than those who were less involved.

The study also found areas in which the capacity to increase giving over time could be explored. Many Americans did not know how their giving compared with others, which suggests that many Americans do not have enough information about how much their peers give and to what they give.

Over 90 percent of respondents reported that they did not pledge a specific dollar amount to other charities. In those cases where persons did pledge an amount to either religious or other charities, average contributions were two to three times higher. These findings suggest that were Americans more aware of how much to give or how to plan for their giving, total giving could measurably increase.

Finally, there were distinct differences in giving behavior among those under 35 years of age from those over 35 years of age when various demographic characteristics and giving behavior were held constant. Some of this giving behavior could change as these younger Americans become older. However, since there is no regular collection of information about giving behavior, it is difficult to assume that giving behavior will change with age among younger Americans. This study has shown that there is a large potential to increase giving among Americans under 35 years of age for regardless of their incomes or other behavioral characteristics, a substantially large proportion do not give as much as the older generation with the same characteristics. If giving is to measurably increase in the future, this group of Americans and their giving patterns need to be monitored as they grow older.

Clearly, an overwhelming majority of individuals believe that they should give to charity and volunteer their time to those who are less fortunate. Although over three-quarters of Americans agree that government should be responsible for those who cannot take care of themselves, there is less consensus about how much responsibility or how much the government ought to spend on the poor. Less than half of Americans believe that government has a responsibility to help the poor in other countries.

Americans' positive attitudes and beliefs about charitable giving and volunteering confirm pervasive American values that individuals have a responsibility to help others. Approximately 40 percent of respondents felt that they should have given more. Furthermore, of the eight out of ten Americans who believed they should volunteer, 49 percent did not volunteer in 1984. These findings indicate that there is a large potential for increasing both giving and volunteering in America.

Implications for Further Study

The study clearly shows that there is a need for further study about motivations and giving behavior. Such studies should include the motivations for giving among all contributors, not just large donors. A more in-depth study of the kinds of volunteer activities and their relationship to giving is needed. Future studies ought to monitor whether Americans have increased their awareness of how their giving compares to their peers, and whether the proportion of Americans who pledge or plan to give a certain amount to charities each year changes over time.

Finally, since there were clear differences in giving behavior between those under 35 years of age and those over 35 years of age, regular studies are needed to monitor the changing behavior of younger Americans as they grow older and take on more responsible roles in society.

SAMPLE DESCRIPTION

This survey is based on telephone interviews conducted February 5 to February 15, 1985 with 1,151 Americans 18 years of age or older from throughout the continental United States.[1] The methods used in sample selection were designed to ensure that the final sample would be truly representative of the total population being surveyed. Stratifications by geographic regions, metropolitan versus nonmetropolitan area and market size were used so that the sample would accurately reflect population distributions. A random digit sampling procedure was used to incude individuals living in households with listed phones in their proper proportions.

The sampled telephone listings were dialed, and in each household contacted the head of household was asked to answer the questionnaire. All interviewing was conducted during weekday evenings and weekend hours to ensure that working individuals would be accurately represented in the sample. Up to two call-backs were made to households where no one was at home or where the head of household was not home on the initial contact.

Two samples were used for this study. The first was comprised of all individuals living in the continental United States; a total of 968 heads of household were interviewed in this sample. The second sample was comprised of individuals living in sections of the country known to contain a large proportion of high-income families. In this second sample, only household heads with a total family income of $30,000 or more were interviewed. The purpose of this second sample was to include a sufficient number of high income households to be able to analyze the charitable behavior of Americans with higher incomes — who tend to give more to charity — by income group. Another purpose was to include a larger number of $500-plus givers in the survey. A total of 183 heads of household were interviewed in this second sample, to bring the total number interviewed to 1,151.

Sample balancing weights were applied to adjust for the inclusion of these high-income respondents, so that analysis of the total population would properly reflect the actual size of income groups in the population as a whole. The distribution of several other key demographic characteristics in the sample were also aligned to their known distributions, as determined by the U.S. Census Bureau, through the same sample balancing procedure. Thus, the final weighted sample accurately reflects the total population being measured on such characteristics as age, income, sex, household size, region, educational attainment, etc.

The maximum sampling error for data based upon the total sample is plus or minus 3% at the 95% confidence level. This means that the chances are 95 out of 100 that a percentage result does not vary — plus or minus — by more than a 3% margin.

---

[1] The 48 coterminous states plus the District of Columbia.

PART I - ATTITUDES TOWARD PHILANTHROPIC ISSUES

1. I'd like to begin by asking you some questions about the role and responsibilities of government. Do you agree or disagree...

	Agree	Disagree	Not Sure
A. The government has a basic responsibility to take care of people who can't take care of themselves.......	16-1	-2	-3
B. The government should guarantee that every citizen has enough to eat and a place to live..................	17-1	-2	-3
C. The government is spending too much money on programs to help the poor......................................	18-1	-2	-3
D. The government has no special responsibilities to spend money helping the poor in other countries.....	19-1	-2	-3

2. Here are some questions about the responsibilities of individuals. Do you agree or disagree...

	Agree	Disagree	Not Sure
A. It is the responsibility of people to give what they can to charity...........	20-1	-2	-3
B. Every person should volunteer some of his time to help those who are less well off................................	21-1	-2	-3
C. It's better to help people you know in your own community than to help people elsewhere...............................	22-1	-2	-3
D. Americans--because they are so wealthy--have a special obligation to help the poor in other countries.................	23-1	-2	-3

3. Now I have a couple of questions about your economic situation. Some people only have enough income to pay for the basic necessities of life, while others have a lot more. Which of these statements best describes your own situation?

(SKIP TO Q.5) - I only have enough money to pay for the basic necessities....................................24-1
I have a small amount left over to spend on other things.................................... -2
I have a moderate amount left over.............. -3
I have a lot left over.......................... -4
(SKIP TO Q.5) - Not sure (VOLUNTEERED)........................... -5

4. In thinking about how you spend your extra money, would you say that you frequently spend it on: (READ AND RECORD FOR EACH. ROTATE ITEMS.)

	Spend On	Do Not Spend On	Not Sure
Saving and investing.......................	25-1	-2	-3
Taking trips and vacations.................	26-1	-2	-3
Buying nice things for yourself or your residence..................................	27-1	-2	-3
Helping out your friends and relatives.....	28-1	-2	-3

5. Do you ever worry about not having enough money in the future?

Yes..........29-1
(SKIP TO Q.7) No........... -2
Not sure..... -3

6. Would you say that you worry about this a lot, a moderate amount, or only a little?

A lot...............30-1
Moderate amount..... -2
Only a little....... -3
Not sure............ -4

PART II - CHARITABLE GIVING

7. In the past year, did you contribute any money to a church or synagogue or to other religious charities?

Yes...................31-1
(SKIP TO Q.12) No.................... -2
Not sure.............. -3
Refused to answer..... -4

IF "YES":

8. How much money would you estimate that you gave to a church or synagogue or to other religious charities in the past year? (PROBE. IF NECESSARY, ASK: Please give me your best estimate. Please give me a range, if you don't recall the exact amount.)

32-
33-
34-
35-
(WRITE IN AMOUNT - OR RANGE OF GIVING)

Not sure of amount.....36-1
Refused to answer...... -2

9. In making your contributions to a church or synagogue, do you try to give a certain percentage of your income each year?

Yes...........37-1
(SKIP TO Q.11) No............ -2
No answer..... -3

IF "YES":

10. What percentage is that?

38-
39-
(WRITE IN)

11. In making these contributions, do you try to give a fixed dollar amount each week--as in making a pledge--or do you decide what to give each time you attend religious services?

Give fixed amount..............40-1
Do not give certain amount..... -2
Mixed, both (VOLUNTEERED)...... -3
No answer...................... -4

12. In the past year, did you contribute any money to nonreligious charities, such as to the United Way, a hospital or health group, or an educational institution?

Yes....................41-1
(SKIP TO Q.14) — No.................... -2
Not sure................ -3
Refused to answer..... -4

IF "YES":

13. About how much money would you estimate that you gave to nonreligious charities in the past year? (PROBE. IF NECESSARY, ASK: Please give me your best estimate. Please give me a range, if you don't recall the exact amount.)

42-
43-
44-
______________________45-
(WRITE IN AMOUNT - OR RANGE OF GIVING)

Not sure of amount.....46-1
Refused to answer...... -2

GO TO Q.15

IF "NO" TO Q. 12:

14. Do you intend to give money to such charities in the future or are you unlikely to do so?

Will give.............47-1
Unlikely to do so..... -2
Not sure.............. -3

GO TO Q.21

15. In making these contributions, do you try to give a certain percentage of your income each year?

Yes...........48-1
(SKIP TO Q.17) — No............. -2
No answer..... -3

IF "YES":

16. What percentage is that?

49-
______________50-
(WRITE IN)

17. In making these contributions, do you have some total amount which you feel you should give annually, or do you make decisions on each gift on its own merit?

Have total amount.............51-1
Make decision on merit........ -2
Mixed, both (VOLUNTEERED)..... -3
No answer..................... -4

18. In making these nonreligious contributions, do your religious beliefs and convictions have any influence on who you decide to give to?

	Yes	52-1
(SKIP TO Q.21)	No	-2
(SKIP TO Q.21)	Not sure	-3

19. Would you say your religious beliefs and convictions greatly influence your nonreligious giving, moderately influence it, or only influence it somewhat?

Greatly influence it	53-1
Moderately influence it	-2
Only influence it somewhat	-3
Not sure (VOLUNTEERED)	-4

20. Would you say your religious beliefs make you more likely to give to: (READ LIST AND RECORD FOR EACH)

	Yes, More Likely	No	Not Sure
Educational organizations	54-1	-2	-3
Medical charities	55-1	-2	-3
Charities that focus on helping poor people	56-1	-2	-3
Charities to assist needy people in other countries	57-1	-2	-3

21. All in all, are you giving as much money to charity as you think you should be giving?

Yes	58-1
No	-2
Not sure (VOLUNTEERED)	-3

22. Compared with other people like yourself, do you think you are giving more to charity, less, or about the same amount to charity?

More	59-1
Less	-2
About the same	-3
Not sure (VOLUNTEERED)	-4

23. Here are some reasons people give for not contributing more to charity. As I read them, please tell me which apply to you.

	Applies	Does Not Apply	Not Sure
Because I can't afford to give more	60-1	-2	-3
Because I would rather spend my money in other ways	61-1	-2	-3
Because I don't think there are any charities that deserve my support	62-1	-2	-3
Because no one asked me to give	63-1	-2	-3
Because I didn't get around to it	64-1	-2	-3

IF RESPONDENT GIVES $500 OR MORE--IN Q.8 AND Q.13 COMBINED--GO TO YELLOW QUESTIONNAIRE. OTHERWISE, PROCEED TO NEXT PAGE.

80-1

CLASSIFICATION DATA (ASK AT THE END OF THE INTERVIEW)

Now I have a few questions for classification purposes.

CARD IV

A. What is your age?

18 - 20 years.................. 6-1
21 - 24 years.................. -2
25 - 29 years.................. -3
30 - 34 years.................. -4

35 - 39 years.................. -5
40 - 49 years.................. -6
50 - 64 years.................. -7
65 years and over.............. -8

B. What is the last grade of school you completed?

8th grade or less.............. 7-1
Some high school............... -2
High school graduate........... -3
Some college................... -4
2-year college graduate........ -5
4-year college graduate........ -6
Postgraduate study............. -7

C. What is your religion?

(SKIP TO Q.E) - Catholic.............. 8-1
(ASK Q.D) - Protestant............ -2
(SKIP TO Q.E) - Jewish................. -3
Greek Orthodox......... -4
Nondenominational..... -5

(ASK Q.D) - Christian
(unspecified)....... -6

(SKIP TO Q.E) - Other: ________________ -7
(SPECIFY)
None.................. -8
Refused............... -9

D. IF PROTESTANT/CHRISTIAN UNSPECIFIED: What denomination is that?

Adventist...................... 9-1
Baptist........................ -2
Congregationalist.............. -3
Episcopalian................... -4

Lutheran....................... -5
Methodist...................... -6
Mormon......................... -7

Pentecostal.................... -8
Presbyterian................... -9
Unitarian...................... -0
United Church of Christ........ -x

Other: ________________________ -y
(SPECIFY)
None...........................10-1

E. How important would you say religion is in your own life? Would you say: (READ LIST)

It is very important,...........11-1
Fairly important, or........... -2
Not very important............. -3
Not sure (DON'T READ).......... -4
No answer...................... -5

F. Do you attend church or synagogue services: (READ LIST)

Every week or nearly every week....................12-1
Once or twice a month.......... -2
Only a few times a year, or.... -3
Never at all................... -4

G. What is your marital status?

Married..................13-1
Single/never married..... -2
Divorced/separated....... -3
Widowed.................. -4

H. How many people, including yourself and all children, live in this household?

(SKIP TO Q.J) - One.............14-1
(CONTINUE) - Two............. -2
Three........... -3
Four............ -4
Five............ -5
Six or more..... -6

I. How many of these people are children under 18 years of age?

None............15-1
One............. -2
Two............. -3
Three........... -4
Four............ -5
Five............ -6
Six or more..... -7

J. What is your occupation?

____

(WRITE IN--DO NOT CHECK LIST)

Professional (doctors, lawyers, teachers, clergy, veterinarians, psychologists, scientists, journalists, writers, laboratory technicians, researchers, airline pilots, athletes, computer programmers, artists, social workers, etc.)	16-1
Business managers (owns business, has managerial position in a business)	-2
Service worker (government employees, police/fire persons, nurses and health workers, postal workers, member of military, etc.)	-3
Clerical and sales (secretaries, typists, clerks, word processors, bookkeepers, cashiers, check-out persons, salespersons, etc.)	-4
Skilled workers (carpenters, electricians, machinists, mechanics, factory foreman or supervisor, union officials, masons, shoemakers, bus drivers, locksmiths, painters, etc.)	-5
Unskilled workers (factory workers, waiters/waitresses, guards, security workers, janitors, toll booth collectors, etc.)	-6
Farmers (farm owners, workers)	-7
Other	-8
Housewife	-9
Retired	-0
Unemployed, not working	-x
Student	-y
Disabled	17-1
No answer	-2

K. IF "MARRIED" (FROM Q.G), ASK: What is your spouse' occupation?

____

(WRITE IN--DO NOT CHECK LIST)

Professional (doctors, lawyers, teachers, clergy, veterinarians, psychologists, scientists, journalists, writers, laboratory technicians, researchers, airline pilots, athletes, computer programmers, artists, social workers, etc.)	18-1
Business managers (owns business, has managerial position in a business)	-2
Service worker (government employees, police/fire persons, nurses and health workers, postal workers, member of military, etc.)	-3
Clerical and sales (secretaries, typists, clerks, word processors, bookkeepers, cashiers, check-out persons, salespersons, etc.)	-4
Skilled workers (carpenters, electricians, machinists, mechanics, factory foreman or supervisor, union officials, masons, shoemakers, bus drivers, locksmiths, painters, etc.)	-5
Unskilled workers (factory workers, waiters/waitresses, guards, security workers, janitors, toll booth collectors, etc.)	-6
Farmers (farm owners, workers)	-7
Other	-8
Housewife	-9
Retired	-0
Unemployed, not working	-x
Student	-y
Disabled	19-1
No answer	-2

L. How long have you lived in the city or community in which you presently reside?

Less than a year	20-1
1 - 2 years	-2
3 - 5 years	-3
6 - 9 years	-4
10 - 14 years	-5
15 years or more	-6

M. How active or involved would you say you are in activities in your community or neighborhood? Would you say you are: (READ LIST)

Very active	21-1
Fairly active	-2
Only somewhat active, or	-3
Not active at all	-4
Haven't lived there that long (VOLUNTEERED)	-5
Not sure/no answer	-6

IF RESPONDENT IS MARRIED (FROM Q.G):

N. How active or involved would you say your wife/husband is in community or neighborhood activities? Would you say she/he is: (READ LIST)

Very active	22-1
Fairly active	-2
Only somewhat active, or	-3
Not active at all	-4
Not sure/no answer	-5

O. During the past year, were you active in any way in volunteer work? By volunteer work, I mean helping others in some way for no monetary payment.

(GO TO Q.P)	Yes, active	23-1
(SKIP TO Q.R IF MARRIED; OTHERWISE TO Q.T)	No, not active	-2
	Not sure	-3

IF "YES" TO Q.O:

P. On the average, about how many hours a week would you say you spent in volunteer work during the past year?

Less than 1 hour	24-1
1 hour	-2
2 hours	-3
3 hours	-4
4 hours	-5
5 hours	-6
6 or more hours	-7

IF RESPONDENT IS MARRIED (FROM Q.G):

R. During the past year, was your wife/husband active in any way in volunteer work?

(GO TO Q.S)	Yes	25-1
(SKIP TO Q.T)	No	-2
	Not sure	-3

IF "YES":

S. On the average, how many hours a week would you say she/he spent in volunteer work in the past year?

Less than 1 hour	26-1
1 hour	-2
2 hours	-3
3 hours	-4
4 hours	-5
5 hours	-6

FOR RESPONDENTS GIVING $500 OR MORE

IMPORTANT

After completing the interview, fill in the respondent's first name and telephone number on both questionnaires.

Respondent's First Name:______________________________

Area Code:________Telephone Number:___________________

CLIP OR STAPLE TOGETHER THE TWO QUESTIONNAIRES ANSWERED BY THE RESPONDENT, WITH THE FIRST QUESTIONNAIRE ON TOP.

24. Now I'm going to read you a list of charities or kinds of charities. Please tell me which of these you gave to in the past year. (ROTATE LIST AT "X" MARKS)

FOR EACH CHARITY GIVEN TO, ASK: And, how much did you give to (name of charity) ?

	Gave To	Did Not Give to	Not Sure	Amount Given (WRITE IN)
The United Way	6-1	-2	-3	20-23
Another social welfare organization, such as the Red Cross, Scouting, or a local community group	7-1	-2	-3	24-27
X				
A hospital	8-1	-2	-3	28-31
Any other medical charity such as a heart fund or a cancer fund	9-1	-2	-3	32-35
X				
A college or university	10-1	-2	-3	36-39
Any other kind of educational charity	11-1	-2	-3	40-43
X				
Public radio or television	12-1	-2	-3	44-47
Any other charity associated with the arts or culture, such as a theater, museum, or library	13-1	-2	-3	48-51
X				
A group concerned with protecting the environment	14-1	-2	-3	52-55
A charity to help people in other countries, such as a famine relief fund or a charity to feed children	15-1	-2	-3	56-59
Did you give to any others that are not on the list?				
(WRITE IN)	16-1	-2	-3	60-63
(WRITE IN)	17-1	-2	-3	64-67
(WRITE IN)	18-1	-2	-3	68-71
(WRITE IN)	19-1	-2	-3	72-75

80-2

25. FIND CHARITY FROM LIST THAT THE LARGEST AMOUNT WAS GIVEN TO. REAFFIRM THIS FACT BY ASKING: Then you gave the most amount of money to (name of charity) ? (GET SPECIFIC NAME)

CARD III

6-
7-

(RECORD NAME OF CHARITY)

26. REAFFIRM THE DOLLAR AMOUNT IN THE SAME MANNER.

8-
9-
10-
11-

(RECORD DOLLAR AMOUNT)

THE NEXT THREE QUESTIONS REFER TO RESPONDENT'S GIVING TO THIS CHARITY.

27. What would you say was the main reason you gave to (name of charity) ? Were there any others? Anything else? (PROBE THOROUGHLY. LIST REASONS SEPARATELY BELOW.)

1. ______________________________ 12-

______________________________ 13-

2. ______________________________ 14-

______________________________ 15-

3. ______________________________ 16-

______________________________ 17-

28. Do you give regularly--on a year-to-year basis--to (name of charity) ?

Yes..........	18-1
No...........	-2
Not sure.....	-3

29. How was it that you came to give to (name of charity) ? Would you say that you volunteered to give on your own, responded to being asked by someone, responded to a letter or to an advertisement in the media, or what?

______________________________ 19-

______________________________ 20-

(WRITE IN IF "OTHER")

Volunteered on own...............	21-1
Responded to being asked..........	-2
Responded to a letter.............	-3
Responded to an advertisement.....	-4
Other.............................	-5
Not sure..........................	-6
No answer/refused.................	-7

30. Overall, is the amount of money you gave to charity in the past year about the same as you usually give--or was it a larger amount or a smaller amount?

☐ About the same.....22-1 (GO TO Q.31) ☐ Larger..... -2 ☐ Smaller..... -3 ☐ Not sure..... -4 (GO TO Q.31)

a. Was there any particular reason you gave more money to charity in the past year?

____

______________________________ 23-

______________________________ 24-

b. Was there any particular reason you gave less money to charity in the past year?

____

______________________________ 25-

______________________________ 26-

31. When you are deciding what to give to charity, do you ever take tax considerations into account--the fact that charitable contributions are tax deductible?

Yes..........27-1
No........... -2
Not sure..... -3

32. Do you think that you give more money to charity because charitable contributions are tax deductible?

Yes..........28-1
(GO TO Q.34) No........... -2
Not sure..... -3

33. How much more do you give to charity because these contributions are tax deductible? Would you say you give about twice as much, about 25% more, about 10% more, or what?

Twice as much..................29-1
25% more....................... -2
10% more....................... -3
A little more (VOLUNTEERED)..... -4
Other.......................... -5
Not sure/no answer............. -6

____
(WRITE IN IF "OTHER")

34. One last question of this nature. People are asked to give to charitable organizations through a variety of means--in letters, telephone calls, and so forth. Which of these approaches would you say you are most likely to respond to? On a scale of 1 to 5, where "5" means most likely and "1" means least likely---how would you rate: (READ AND RECORD FOR EACH ITEM. ROTATE LIST.)

	Most Likely				Least Likely	Not Sure Not Applicable
Receiving a letter asking you to give.....	30-5	-4	-3	-2	-1	-0
Receiving a phone call asking you to give..................................	31-5	-4	-3	-2	-1	-0
Someone coming to the door asking you to give.............................	32-5	-4	-3	-2	-1	-0
Being asked at work to give..............	33-5	-4	-3	-2	-1	-0
Being asked to give by someone you know well................................	34-5	-4	-3	-2	-1	-0
Seeing a television commercial asking you to give..............................	35-5	-4	-3	-2	-1	-0
Reading a newspaper or magazine advertisement asking you to give..........	36-5	-4	-3	-2	-1	-0
Being asked to give in a telethon or radiothon.............................	37-5	-4	-3	-2	-1	-0
